AIR NAVIGATION RADIO AIDS

INSAC = Interstate Airway Communications Station (CAA).

VHF OMNI-RANGES: "Non-commissioned" VHF omni-ranges may lack certain items, such as monitoring or control equipment or may not have been flight-checked and are subject to shut-down at any time without notice. The courses may or may not be within the prescribed tolerances and the station is to be used accordingly.

NOTE: See OMNIRANGES USE, page 80.

VAR AND VOR MONITORING CLASSIFICATION FOR AIR TRAFFIC CONTROL PURPOSES: Category I (VAR) = Following conditions must be met: (A) The visual course alignment and signal level are monitored continuously. (B) The aural "A" or "N" sector signal is monitored continuously by the communicator at the associated INSAC. (C) The station identification is monitored continuously by the communicator at the associated INSAC. (D) The aural course alignment is monitored at least once each hour by the communicator at the associated INSAC. Category I (VOR) = Course alignment and signal level are monitored continuously. NOTE: Category I indicated by parenthetical (1). Category II (VAR only) = If all except (D) of the conditions of Category are met. NOTE: Category II indicated by parenthetical (2). Category III = Facility monitored solely through use of automatic visual course and signal level monitor with automatic transfer unit. This category may permit VOR to be inoperative for a limited period before a notice to airmen is issued. Normally, VHF ranges which are not controlled by an INSAC, and located too distant from INSAC to be monitored with a VHF receiver will fall into Category III. NOTE: Category III indicated by parenthetical (3).

LEGEND

(A) = Air Force facility. (N) = Navy facility. (P) = Private facility
(g) = Tower equipped with 121.9 or 121.7 mc transmitter for control of ground traffic. (7-19) = Hours of operation, i.e., 0700-1900
(U) = Unmonitored, but usable for navigation (3) = Monitoring category
(B) = Blue Hemisphere; (Y) = Yellow hemisphere
→ = New or revised data
V = New facilities or name changes, see page 20

NOTE: Letters between range crs are quadrant identifiers, e.g., "90 YN 180" indicates the quadrant between the two crs is a yellow N quadrant. The letter immediately following a range crs indicates whether the course is aural or visual, i.e., "Y" or "B", for yellow or blue, indicates visual: "A" or "N", arual. In the case of low frequency ranges, the A or N cited between two courses is the identification to be heard in the quadrant between those two courses.

RADIO CLASS DESIGNATIONS

AC. . .Approach Control Tower, CAA (transmits on voice channel of associated L/MF range or ILS in addition to frequencies listed)
B. . . . Scheduled Broadcast Station (broadcasts weather at 15 & 45 minutes after the hour; Air Force Broadcasts, generally, 29 minutes)
C. . . . Control Tower, CAA
CA. . . Control Tower, Air Force
CI. . . Control Tower (City, County, Private, etc.)
CN. . ..Control Tower, Navy
D. . . . Distantly controlled
FM. . . VHF fan marker (100 watts)
GCA. . Ground Controlled approach system
H. . . . Non-directional radio beacon (homing), power 50 watts to less than 2000 watts
HH. . . Non-directional radio beacon (homing), power 2000 watts or more
ILS . . .Instrument Landing System (voice on localizer channel)
J. . . . L/MF (200 - 415 kc) voice facility on other than range frequency
LFM. . VHF fan marker, low powered (5 watts)
LMM. .Compass locator station when combined with middle marker of ILS
LOM. . Compass locator when installed at outer marker site or within 5.5 miles of middle marker
MH. . Non-directional radio beacon (homing) power less than 50 watts
ML. . Range (loop radiators), power less than 50 watts
MM. ..VHF middle marker
MOR.. Low frequency omni-directional range
MRA. . Range (adcock, vertical radiators), power 50 or more, but less than 150 watts
MRL .. Range (loop radiators), power 50 or more, but less than 150 watts
OM. . .VHF outer marker
P. . . . Point-to-Point radio
RA. . . Range (adcock, vertical radiators), power 150 watts or more
RL. . . Range (loop radiators), power 150 watts or more

FREQUENCY LEGEND

V = 135.9 and 135.0 mc transmitted.
# = Guards same VHF frequencies station transmits except 122.2 mc and 135.0 mc.
(1) = 3105,4495 kc guarded
(2) = 3105. 4495kc; 122.5 mc. This group of frequencies is group generally guarded by C.A.A. towers.
(3) = 3105,4495 kc; 122.1,126.7, 135.9 mc. This group of frequencies is group generally guarded by INSACS.
e.g., (3)-135.9, 122.1 = guards every frequency in group (3) except 135.9 and 122.1

NOTES

1. Range courses are magnetic in-bearings.
2. All C.A.A. MH facilities operate continuously unless cited as follows: (on req)
3. All C.A.A. ranges operate continuously. Those which are not manned continuously are cited in the class column with hours of operation in parentheses, e.g., (6-24)
4. When a VOR or VAR is controlled by an associated LF range, because of space limitation, DTV is not included in the VHF range class.

Pilots are requested to indicate when calling C.A.A. airway communications stations and control towers the frequency on which the reply is expected.

ALWAYS CHECK NOTICES TO AIRMEN SECTION

RADAR AVAILABLE : How and Where

PAR = PRECISION APPROACH RADAR. ASR = AIRPORT SURVEILLANCE RADAR.
GCA = GROUND CONTROLLED APPROACH - MILITARY EQUIVALENT OF COMBINED ASR AND PAR EQUIPMENT

GROUND CONTROLLED APPROACHES - The only airborne equipment required for ground controlled approaches is a functioning radio transmitter and receiver. There are two types of ground controlled approaches - Precision and Surveillance (PPI).

PRECISION APPROACHES - Aircraft are guided to final approach to the designated instrument runway. The final approach flight path on a precision scope (PAR) is greatly expanded for increased accuracy and furnishes the controller with range, azimuth and altitude information. This permits the controller to accurately guide aircraft to touchdown on the runway.

SURVEILLANCE or PPI APPROACHES - Only the ASR scope is used and aircraft may be directed to any selected runway over approximately the same flight path the pilot would take if flying VFR. This scope furnishes range and azimuth information only. Since no altitude information is available to the controller, pilots must control their descent based on the glide angle desired, and the distance from the runway as furnished by the controller. Because ASR does not permit the same degree of accuracy as PAR, the weather minimums for this type of approach are at least as high as, and in some instances higher than, the regular circling minimums listed in the Flight Information Manual for the airport.

CAA RADAR UNITS - Operate continuously at the locations listed. Available to all pilots, civil and military. Contact associated CAA control tower on any frequency guarded for initial instructions, or in an emergency any CAA facility for information on nearest Radar Control. Weather minimums, associated runways and GCA procedures are listed in the Flight Information Manual.

AIR FORCE AND NAVY GCA UNITS - Available to civil pilots in emergency or by prior arrangement with C.O. of respective facility.

Contact under IFR: Pilots desiring GCA assistance during IFR conditions should call the nearest air traffic control facility (radio, airways, or tower, etc.) requesting GCA and further instructions.

Contact under VFR: VFR check-out of training flights should be arranged locally through Base Operations or the Control Tower.

Emergency: When receiver or transmitter difficulties exist, the tower may relay GCA approach instructions to the pilot, or the GCA operator may transmit, in blind, instructions for aircraft to make three hundred sixty (360) degree turns for identification. In either case, instructions will be followed at the pilot's discretion.

After being inoperative, GCA units require 20 to 30 minutes for warming up. Pilots should anticipate requirements for GCA in flight planning and request alerting of GCA units as far in advance as possible.

Civil minimums at military installations estabilshed by the CAA are 400' ceiling and 1 mile visibility except in emergency unless Air Force or Navy facility being used has higher minimums.

Navy units are prepared to transmit on HF from 2000 to 18,100 kc and receive any frequency from 1500 to 9050 kc to aid any plane in emergency.

Alt MSL=Min. alt. over airport.

(D) = Day. (N) = Night. ➔=New or revised data. ✓ = New facilities or name changes.

ALWAYS CHECK NOTICES TO AIRMEN SECTION

CITY AND AIRPORT NAME

(AF) Airport name followed by city name in parenthesis (With AF in Type Column) - field owned or leased in whole by U.S. Air Force.

(AF) City and Airport Name (with C,I,M,MG or P in Type Column) - a civil airport with Air Force operations, reserve training, or other such acitvity thereon.

NOTE: Similar combinations of above two citations of A,N,CG, and NG indicate the same is applicable for Army, Navy, Coast Guard, and National Guard fields respectively.

(P) City and Airport Name - Civil Airport covered by an agreement between municipality and U.S. Government which permits use by transient military aircraft.

(PC) Same legal status as (P), but closed to all USAF pilots not possessing their own clearance authority in accordance with AFR 60-16.

* City, Site No., and Airway abbreviation - CAA intermediate field. Municipal airports with lights maintained by the CAA are listed similarly except there is no prefixed star.

NOTES:

1. MILITARY FIELDS ARE OPEN TO CIVIL AIRCRAFT ONLY BY PRIOR PERMISSION OF THE C.O. THEREOF. ALL AIRPORTS with C,I,M, or MG in type column are open to civil fliers.

2. USAF aircraft are permitted to use only those fields prefixed with an AF,A,N,NG,CG,P,PC or *.

3. When city and airport names are identical, the airport name is omitted to conserve space.

TYPE

AF	-Air Force	C	-Commercial	MG	-Misc. Govt
A	-Army (May also be used by Army Nat'l Guard)	CG	-Coast Guard	N	-Navy
		I	-Intermediate	NG	-Air Nat'l Guard
		M	-Municipal	P	-Private

LOCATION

The word "miles" has been eliminated because of space limitations. Mileage is that from the center of city to airport.

If orientation features are less than 1/2 mile from the field, distance is not specified

ELEVATION

Obviously, the effective length of a runway decreases with elevation above sea level. The C.A.A. formula for elevation correction is that a sea level runway length requirement must be increased 7% per 1000 feet of elevation above sea level. High temperatures also play an important role in reducing the effective length of runways.

NUMBER OF RUNWAYS

No differentiation is made between runways and strips as far as number of landing areas in field is concerned.

DIRECTORY OF AIRPORTS
LEGEND

LONGEST RUNWAY
FACILITIES

In this column are included the length and surfacing of the longest runway, the lighting and servicing facilities, and weather reports available.

RUNWAYS

The length of the longest paved runway or non-paved strip is stated in hundreds of feet. If the length is not prefixed, the surface is sod, clay, gravel, etc.

h - runway is paved (concrete, asphalt or similar type of paving)

aw - allway field

(26) - runway or strip length not verified by C.A.A.

LIGHTS

B: Rotating Light (Rotating beacon)
(Green and white, split-beam and other types)
Omission of B indicates rotating light is either not available or not operating standard hours (sunset-sunrise).

NOTE: Code lights are not codified, and are carried in Remarks Column.

L: Field Lighting

- L - by itself indicates temporary lighting, such as flares, smudge pots, lanterns.
- 1 - Portable lights (Electrical)
- 2 - Boundary
- 3 - Runway floods
- 4 - Runway or Strip
- 5 - Instrument approach (neon)
- 6 - High intensity runway
- 7 - High intensity instrument approach

* An asterisk preceding an element indicates that it operates on prior request only (by phone call, telegram or letter). Where the asterisk is not shown, the lights are in operation or available sunset to sunrise by request (circling the field or radio call).

Because the obstructions on virtually all lighted fields are obstruction lighted, obstruction lights have not been included in the codification.

SERVICING

S1: Storage
S2: Storage, minor aircraft repairs
S3: Storage, minor aircraft, and minor engine repairs
S4: Storage, major aircraft, and minor engine repairs
S5: Storage, major aircraft, and major engine repairs

NOTE: Any S combination without parenthesis indicates only full-time day attendant. Fields having lighting facilities may have 24 hours attendant available.

Any S combination in parenthesis-part time or irregular attendant.

WEATHER

W: Weather reports available from Weather Bureau or C.A.A. communications station on field.

FUEL OCTANE

Civil Fuel:

F1: 80 oct., at least
F2: 87 oct., and lower
F3: 91 oct., and lower
F4: 100 oct., and lower

NOTE: If only one octane available, this octane cited, and not coded.

Any F combination without parenthesis indicates full time day attendant, in parenthesis part-time or irregular attendant.

REMARKS

(a) "INACTIVE" indicates usable civil field, but not being operated, at last inspection. Caution advised.

(b) "CLOSED" indicates closed to all traffic except in emergency.

(c) "OFL BUS ONLY" indicates closed to all transient military aircraft except on official business or in emergency. U.S. Aircraft require written orders. "AF OFL BUS ONLY" or "NAVY OFL BUS ONLY" indicates applicability of restriction only to Service indicated.

(c) "INACT - NO FACS" indicates AF airfields used exclusively by the USAF or municipal fields used jointly by the USAF and civil interest at which both USAF and civil interest are inactive; these will be available to military aircraft at the discretion of the Commanding Officer of the organization to which aircraft are assigned.

(e) "CIVIL FACS ONLY" indicates municipal fields under joint control or ownership of the USAF and/or Navy and civil interests at which no USAF or Navy facilities are available. Such fields may be used by military aircraft; however, only commercial service is available.

(f) "LIMITED USE" indicates some special restriction on use of field which will be listed in Notices to Airmen section of Airman's Guide.

(g) "ABANDONED" indicates reverted to non-airport usage such as farming or grazing.

(h) "REPORTED ABANDONED" indicates an airport reported abandoned but not verified as such by C.A.A.

(i) "FEE" indicates landing charges for private or non-revenue producing aircraft. In addition, fees may be charged for planes that remain over a couple of hours and buy no services, or at major airline terminals for all aircraft.

(j) "Bkd" indicates approaches where glide angle to runway is 3:1 or less.

(k) "Rgt tfc N" indicates right turns should be made on landings and take-offs to N.

(l) "A,B" indicates Air Force or Navy fuel. See Fuel Octane column.

NOTES

1. → New or revised data.
2. SCHEDULED AIRLINE STOP airport names are capitalized.
3. PRIVATE AIRPORTS: Usually unattended, offer no public service and solicit no public patronage. Such fields are listed primarily because of their possible utility as emergency landing areas. Use of these fields is at the risk of the user. No "S" or "F" combination is ever assigned these fields.
4. OBSTRUCTIONS: Because of space limitations only the more dangerous obstructions are indicated. Natural obstructions, like trees, for example, clearly discernible for contact operations, are frequently omitted. On the other hand, all pole lines within at least 15:1 glide angle are indicated.
5. NEW AIRPORTS: At the end of each state, under this heading will be found, out of alphabetical alignment, all the new airports tabulated after the type for that state had been originally set up.

NAVY SPECIAL NOTICES

NAVY DATA: In accordance with Hydrographic Office Memorandum for Aviators, No. 17, September 17, 1948, before any changes or modifications of any aid to air navigation, such as realignment of radio ranges, modified instrument approach procedures, relocation of fan markers, etc., can be published by the Hydrographic Office, the Command requesting the change must first obtain approval from the Office of Chief of Naval Operations, Navy Department, Washington 25, D. C. When an approved change or modification has been made to any aid to air navigation, the Command shall immediately notify the U. S. Navy Hydrographic Office, Division of Air Navigation, Washington 25, D. C.

All Naval Air Stations and Air Facilities are directed to notify the U. S. Navy Hydrographic Office, Division of Air Navigation, Washington 25, D. C., direct, of all contemplated or immediate changes in their field facilities, operation rules, air-ground communication facilities, GCA, etc., and other factors affecting safe operation of aircraft which do not necessitate approval from CNO. This may be done by letter, speedletter, or dispatch, as applicable.

In accordance with Chief of Naval Operations Aviation Circular Letter 19-49 March 2, 1949, approval for the closing of any Navy or Marine Corps Air Station or Air Facility to transient military aircraft for a period in excess of ten days must be obtained from the Chief of Naval Operations.

Commanding Officers of Naval and Marine Corps aviation activities are directed to review all information published by the Hydrographic Office, U. S. Air Force, Civil Aeronautics Administration, and Coast and Geodetic Survey on facilities under their command and immediately forward any corrections or approved amendments direct to the publishing agency. A copy of the corrections or amendments to information published by other agencies should be forwarded to the Hydrographic Office. The charts and publications issued by the above-mentioned agencies must be currently maintained in order that all aviators can be kept informed of changes to airfields, seaplane anchorages, navigational aids, and other factors affecting the safe operation of aircraft.

AIR FORCE SPECIAL NOTICES

AIR FORCE DATA: Advice covering Air Force fields or Air Force operations on civil fields, or Air Force radio facilities, and also Air National Guard fields and facilities should be forwarded to: Commanding Officer, USAF Aeronautical Chart & Information Service, Washington 25, D. C.; Attn: Aeronautical Information Division.

Requests for approval of the closing of Air Force airfields or restrictions in airfield facilities to transient military aircraft for over ten days should be forwarded through channels to Headquarters, U. S. Air Force. Restrictions in Air National Guard fields or facilities will be forwarded to the National Guard Bureau through the State Adjutant General for approval. Information to be published will be coordinated and submitted to the Civil Aeronautics Administration by Headquarters USAF ACIS.

In connection with the above, the attention of all base operations officers is invited to A. F. Regulation 55-12 of July 1, 1949, subject, "Notices to Airmen", A. F. Regulation 5-16 of February 20, 1948, subject, "Responsibilities for Flight Publications", and to A. F. Regulation 60-23 of September 23, 1947, subject, "Restrictions on Landing at Army Airfields".

AIR FORCE OFFICIAL BUSINESS: Air Force official business within the meaning of Air Force Regulation 85-2 is interpreted as the necessity for personnel aboard an aircraft to contact personnel, units, or organizations at or near the airfield selected for landing for the purpose of conducting transactions in the service of, and in the interest of, the United States Government. This does not include the use of an airfield by transient aircraft for the purpose of obtaining clearance, service, or other items attendant to itinerant operations. Cross country flights for the purpose of maintaining flying proficiency are not considered to be official business within the meaning of this regulation.

**In 4 channel equipment (ARC-5 and SCR-522) 132.3 mc or 142.02 mc may be substituted on Channel C and D in accordance with operational requirements.

UTILIZATION OF CAA VAR STATIONS BY MILITARY AIRCRAFT: The attention of pilots is directed to the fact that voice facilities are available at many VAR stations (see pages 90 thru 103, A. N. 08-15-1), and CAA communications stations are located thereat. Such VAR facilities should be utilized for navigational aid and communications services, particularly when standard low frequency facilities are not available.

SPECIAL CHARTS OF ATOMIC ENERGY AIRSPACE RESERVATIONS: The Atomic Energy Commission has issued a special chart depicting airspace reservations in the United States. Copies of this chart are being supplied each Air Force Base, AF Reserve Unit, National Guard Unit and other activities on the same mailing list basis as used for Airman's Guide. Operations officers should prominently display this chart and assure that pilots contemplating flight adjacent to these areas are briefed upon their existence, location and restricted status.

AIR FORCE FOREIGN CLEARING STATIONS: Under the authority of Air Force Regulation 60-8 of July 6, 1949, U. S. Air Force aircraft with destinations listed below or returning therefrom to the United States will clear through the stations indicated:

AFRICA and AZORES: Brookley AFB, Ala.; MacDill AFB, Fla.; Washington National Airport, D. C.; or Westover AFB, Mass.

ALASKA: McChord AFB, Wash.; Great Falls AFB, Mont.; or Travis AFB, Calif.

BERMUDA: Mitchel AFB, N. Y.; Brookley AFB, Ala.; MacDill AFB, Fla.; Washington National Airport, D. C.; Travis AFB, Calif.; or Westover AFB, Mass.

CANADA: Great Falls AFB, Mont.; Brookley AFB, Ala.; McChord AFB, Wash.; Washington National Airport, D. C.; Selfridge AFB, Mich.; Westover AFB, Mass.; or Mitchel AFB, N. Y.

CANAL ZONE, CENTRAL AMERICA, MEXICO, AND SOUTH AMERICA: MacDill AFB, Fla.; Kelly AFB, Texas; Brookley AFB, Ala.; Washington National Airport, D. C. March AFB, Calif.

CARIBBEAN: Brookley AFB, Ala.; Kelly AFB, Texas; MacDill AFB, Fla.; Washington National Airport, D. C.

ENGLAND, GREENLAND, ICELAND, AND NORTH IRELAND: Washington National Airport, D. C.; or Westover AFB, Mass.

EUROPEAN THEATER: Brookley AFB, Ala.; MacDill AFB, Fla.; Washington National Airport, D. C.; Westover AFB, Mass.; or Kelly AFB, Texas.

HAWAII: Travis AFB, California.

NOVA SCOTIA and NEWFOUNDLAND: Washington National Airport, D. C.; Westover AFB, Mass.; Selfridge AFB, Mich.; Brookley AFB, Ala.; or Mitchel AFB, New York.

The classified "Foreign Clearance Information Guide", published by Aeronautical Chart and Information Service and now distributed to all Air Force bases should be consulted prior to departure for foreign clearing station, particularly with regard to diplomatic requirements for country for which clearance is desired, in order that appropriate advance notice of flight may be given and delay at foreign station may be avoided.

CURRENT FEDERAL AIRWAYS MANUALS OF OPERATION: The following publications are now distributed in accordance with AF Regulation 5-12, and supersede listing given in paragraph 5 of this regulation. Base operations officers, weather and communication units should check copies in use to insure that latest issues and all revisions are available. Mailing lists are now maintained in accordance with groupings of material as follows:

GROUP I MATERIAL: II-B. Instructions for the Operation of Communications Facilities, First Edition, January 15, 1950 (This replaces II-B-2, II-B-3, II-B-5, II-B-7, II-B-8 and II-B-11); M-59, November 5, 1949 (Service "B").

GROUP II MATERIAL: Location Identifiers, Fourth Edition, July 1, 1950, with two revisions.

GROUP III MATERIAL: Contractions, Fifth Edition, December 1, 1949.

GROUP IV MATERIAL: Civil Airways Mileage Chart of Dec. 27, 1950.

GROUP V MATERIAL: Teletype Service "A" Manual, September 19, 1950; Teletype Service "C" Manual, January 9, 1951; Teletype Maps: M-11 December 1, 1949, and M-14, April 15, 1950 (Service "A"); M-10, October 1, 1949, and M-13, November 1, 1950 (Service "C"); M-58, August 15, 1950 (Service "A", "C", and "O").

GROUP VI MATERIAL: Teletype Service "O" Manual, May 1, 1950, with Revision 6. (Revisions 1-5 obsolete). Teletype Maps M-89, February 1, 1950 (Service "O") and M-58 (Service "A", "C" and "O").

Requests for distribution should be directed to Commanding Officer, Aeronautical Chart and Information Service, Washington 25, D. C. Attn: Aeronautical Information Division.

NEW USAF POLICY REGARDING USE OF INACTIVE FIELDS: In accordance with directive from Headquarters, USAF, Air Force fields which are on inactive status and are listed in the Directory as "INACT-NO FACS" will in the future be closed to all USAF pilots not possessing their own clearance authority in accordance with AFR 60-16, unless on official business with written orders.

COMPULSORY REPORTING POINTS- VAR RANGE FACILITIES: VAR Facilities designated by CAA and shown on radio facility charts as Compulsory Reporting Points will be applicable to USAF aircraft only if the aircraft is equipped with the necessary instruments and radio frequencies and if a flight plan has been filed with ATC declaring the intention to utilize these facilities. When ATC clearances include instructions using these facilities and the aircraft is not equipped for such use, the pilot should so advise the traffic control agency and request amended traffic control instructions.

✓ UHF CHANNELIZATION: An initial UHF channelization plan has been approved for USAF and USN UHF-equipped aircraft in the U. S. and will be published in subsequent issues of the Radio Facility Charts. UHF frequencies which are being first implemented at USAF stations on a continuing program beginning 1 July 1951 are:

Channel 1	Control tower (military primary)	236.6 mc
" 15	Military Airways	258.20 mc
" 17	GCA	335.80 mc
" 18	GCA	289.40 mc
Guard	Military emergency	243.00 mc

CAA stations, towers and centers will provide service on UHF. Channels to be used and date services will be availalbe will be found in the Notices To Airmen Section.

CIVIL SPECIAL NOTICES

CIVIL DATA: The Airman's Guide covers primarily two broad fields of civil airport information, namely so-called permanent data changes and temporary hazardous conditions. Permanent airport data refer to new airports or changes in field layout or servicing, lighting or permanent obstructions on existing airports. Temporary hazardous conditions refer to conditions that make such airports temporarily unusable or usable only with caution. Such hazardous conditions could be, for example, a field closed because of floods, spring thaws, or construction, or merely a burned-out obstruction light or runway partially unusable because of construction.

Obviously, temporary hazardous conditions should be reported to the aeronautical public at once. The necessity for reporting additional aids or minor changes in existing aids however, isn't nearly as cogent. In other words, a temporarily closed airport is ordinarily of much more importance from a safety viewpoint than is a new airport, and the aeronautical public should be told about it as expeditiously as possible. (11-6-51)

Notamizing of advice covering a field unusable because of flood or snow, a runway closed because of construction, or the erection of a pole-line in an approach, doesn't necessitate an engineering background on the part of the reporter. Too, safety frequently necessitates the notamizing of such advice before an official check can be made. On the other hand, advice covering permanent airport data changes, such as a new airport, or a lengthened landing strip, or an additional hangar, obviously doesn't require the same expeditious transmission to the aeronautical public, and the data may be checked from an engineering standpoint and for standardization before being publicized.

SUMMATION: (a) Since the aeronautical public should be immediately advised on hazardous conditions , reporters should utilize the CAA Airway Communications Stations. The item to be reported, therefore, should either be telephoned or mailed to the nearest communications station for dissemination as a notam and for further transmission to the publishers of the Airman's Guide. (If this is not feasible the items should be reported directly to the Office of Aviation Development, Attention: W-155, Washington 25, D.C.)

(b) Permanent airport data changes (as differentiated from temporary hazardous conditions) should be reported to the appropriate C.A.A. District Airport Engineer for coordination before they are included in the Airman's Guide.

CIVIL USAGE OF MILITARY FIELDS: U.S. Air Force and Navy fields are open to civil fliers only in emergency or with prior permission of the commanding officers thereof.

DIRECTORY OF AIRPORTS AND AIR NAVIGATION RADIO AIDS NOTAMS: Because of space limitation, the Airport Directory and Air Navigation Radio Aids perforce serve as a notam supplement. Notam data revising a previous Directory or ANRA are indicated by prefixed arrows. The only airport or radio data (other than temporary conditions of short duration) carried in the Notices to Airmen Section are facility coordinates, post-deadline data or data impossible to incorporate in the two above tabulations.

DIRECT COMMUNICATIONS WITH AIR ROUTE TRAFFIC CONTROL CENTERS: The CAA has inaugurated a procedure whereby pilots operating on IFR flight plans may have direct communication with air route traffic controllers at certain control centers. VHF on a simplex basis (call-up and reply on the same frequency) is used. This enables the controller to issue traffic clearances and receive indications of compliance therewith in such a manner that all air traffic is expedited. The center will guard the assigned frequency. However, each specific aircraft, with which the center desires to establish direct communication for control purposes, will receive a clearance through the appropriate CAA, AACS or Air Carrier Communications Station, indicating the time or place the controller desires to communicate directly with the pilot.

The locations at which this direct communications procedure is available are listed in the Air Navigation Radio Aids Section of the Airman's Guide. Each one is listed alphabetically following the tower listing.

VERY HIGH FREQUENCIES FOR PRIVATE PILOTS: Use of very high frequency channels by the majority of private pilots has heretofore been limited to the channels 121.5, 122.1, 122.5 and 122.8 mc. Now, however, any private pilot having need for additional channels may apply to the FCC for use of any of the 40 channels in the 118.1 to 126.7 mc band. To determine their additional requirements, pilots should consult the Airman's Guide (Radio Facilities Section) or contact the nearest CAA regional office for information concerning the channels which have been implemented at the various locations. Of particular interest may be the channel 126.7 mc which was previously limited to use by air carriers for communication with CAA stations (INSACS) but now may be used by any private pilot if required for that purpose.

DVFR FLIGHT PLANS: When an IFR flight plan is canceled, a DVFR flight plan should be filed if the provisions of Part 620 of the Regulations of the Administrator will be applicable to any portion of the remainder of the flight.

AERONAUTICAL ADVISORY STATIONS (FREQUENCY 122.8 mc): This requency is known in some areas as the "private flyers frequency" and also as "UNICOM". Licenses for ground stations and aircraft are now being issued by the FCC subsequent to receipt of application for license from private pilots and airport operators eligible to use the frequency. Under the FCC rules, private aircraft may use 122.8 mc for communication with aeronautical advisory stations and between private aircraft themselves while in flight. Particular attention is invited to Section 9.1001 which follows:

"9.1001 Eligibility for station license. Authorizations for aeronatuical advisory stations will be issued only to the owner or operator of a landing area, not served by an airdrome control station. Only one Aeronautical Advisory station will be authorized at a landing area"

The scope of service to be rendered under FCC rules for the ground station is:
"9.1004 Scope of service. (a) Communications shall be limited to the necessities of safe and expeditious operation of aircraft. The service shall be advisory in nature, pertaining to the condition of runways, types of fuel available, wind conditions, available weather information or other information necessary for aircraft operations. (b) Aeronautical Advisory stations shall not be used for the control of aircraft."

The following locations have been reported as having Aeronautical Advisory Service available:

Bloomsburg Arpt, Pa. (0800-2300)
Claremont Arpt, N. H. (daylight hours)
Concord Arpt, N. H. (daylight hours)
Davenport Arpt, Iowa (0730-2000)

Airport operators interested in providing this service may obtain further details from the nearest FCC or CAA field office.

AIR TRAFFIC CLEARANCES: The initial traffic clearance issued to an aircraft prior to departure will normally authorize flight to the point of first intended landing, with instructions to maintain the altitude at which the aircraft enters the next control area. The pilot should request any desired altitude changes en route. Better service can be given the pilot if any altitude change is requested at the time the change is desired. An amendment to the initial clearance may be issued to a flight at any time the air traffic controller deems such action necessary to avoid possible confliction between en route, landing, or departing aircraft. A flight is always cleared to a specific point or location (radio or visual reporting point), defined as a clearance limit. If the assigned altitude is below the minimum for a subsequent portion of the flight and radio failure is experienced, the procedures outlined under TWO-WAY RADIO FAILURE must be followed to insure proper terrain clearance.

Whenever an aircraft has been cleared to a point other than the destination airport it is the responsibility of Air Traffic Control to issue whatever further clearance is appropriate at least five minutes before the aircraft arrives at the clearance limit, unless holding instructions and a time at which the pilot may expect further clearance have been received and acknowledged by the pilot. In the event a pilot arrives at a clearance limit without having received either a clearance beyond or holding instructions at such fix, he should immediately request further clearance and hold at the clearance limit, maintaining the last assigned altitude, until further clearance is received. When a clearance limit is a point other than the destination airport, the altitude of the aircraft at this clearance limit will be protected so that separation will exist in the event the aircraft must hold awaiting further clearance.
NOTE: The foregoing should not be construed as being related in any way to the procedures which apply when a two-way radio failure occurs.

INSAC VHF REPLY TO PRIVATE AIRCRAFT: The new national ground-to-air call-up and reply channel for communication with private aircraft, 122.2 mc was implemented at certain INSACs on August 1, 1951. Eventually, all INSACs will transmit on 122.2 mc but in the meantime VHF reply to private aircraft will be furnished on the VHF range voice channel at INSACs which have not yet commissioned 122.2 mc. Pilots should consult the Airman's Guide and current NOTAMS for information on on frequencies available at specific stations. The frequency upon which the pilot expects reply should be specified in the initial call. When an INSAC is unable to reply on the VHF range voice channel because of equipment failure or maintenance shutdown, reply will be made on 121.5 mc. A small number of INSACs have not yet installed transmitting service on 121.5 mc. At these locations, the reply on 121.5 mc will be made by an adjacent control tower. Therefore, when a pilot calling such station has reason to believe that the VHF range voice channel is not operating, he should request reply on 121.5 mc.

√TRANSMISSION OF "V" BY VAR RANGES: Effective on or about November 15, 1951, the letter "V" will be transmitted by all VAR ranges. It will precede the usual location identifier and be separated from it by a short space. It is intended to enable pilots to distinguish instantly between the aural directional signals of VHF ranges, and those of low or medium frequency ranges located in the same general area. It will, for example, guard against the possibility of an error occuring through accidental connection of a pilot's headset to the wrong receiver. The "V" will be transmitted at an appreciably higher rate of speed than the location identifier.

√INSTRUMENT APPROACH PROCEDURES: The standard instrument approach procedures for the following airports have been CANCELLED, effective Oct. 12, 1951: Low Frequency Radio Range: Drummond, Mont., Drummond Arpt.; Toledo, Wash., Toledo-Winlock Arpt.; Whitehall, Mont., CAA Int. Field. The Ft. Knox, Ky., Godman AFB, LF range procedure has been CANCELLED, effective Sept. 28, 1951.

√ON-REQUEST REPORTING POINT: Effective immediately the following on-request reporting point is established: SMITH POINT INTERSECTION - The intsxn of the SE crs of Patuxent River, Md., NAS rng and the W crs of Chincoteague, Va. NAAS rng.

√DANGER AREAS: The following Danger Area amendment shall be effective as dated unless otherwise advised:

AMENDMENT NO. 2 to PART 608 - DANGER AREAS
(November 9, 1951)

(1) In Section 608.15, an Eads, Colorado area is added to read: Location: EADS (Denver Chart); Description: A circular area having a radius of 5 miles centered at lat. 38-27-00, long. 102-36-30; Altitudes: Surface to 8000' MSL; Time: Continuous; Using Agency: Bureau of Standards.

(2) In Section 608.15, a Galatea, Colorado area is added to read: Location: Galatea (Denver Chart); Description: A circular area having a radius of 5 miles centered at lat. 38-30-00, long. 103-00-45; Altitudes: Surface to 8200' MSL; Time: Continuous; Using Agency: Bureau of Standards.

(3) In Section 608.15, a Karval, Colorado area is added to read: Location: KARVAL (Denver Chart); Description: A circular area having a radius of 5 miles centered at lat. 38-44-00, long. 103-31-30; Altitudes: Surface to 9000' MSL; Time: Continuous; Using Agency: Bureau of Standards.

(4) In Section 608.15, a Kendrick, Colorado area is added to read: Location: KENDRICK (Denver Chart); Description: A circular area having a radius of 5 miles centered at lat. 38-43-30, long. 104-01-30; Altitudes: Surface to 9600' MSL; Time: Continuous; Using Agency: Bureau of Standards.

(5) In Section 608.24, a Coldwater, Kansas area is added to read: Location: COLDWATER (Wichita Chart); Description: A circular area having a radius of 5 miles centered at lat. 37-27-30, long. 99-19-00; Altitudes: Surface to 6000' MSL; Time: Continuous; Using Agency: Bureau of Standards.

(6) In Section 608.24, a Lake City, Kansas area is added to read: Location: LAKE CITY (Wichita Chart); Description: A circular area having a radius of 5 miles centered at lat. 37-21-30, long. 98-49-00; Altitudes: Surface to 5800' MSL; Time: Continuous; Using Agency: Bureau of Standards.

(7) In Section 608.24, a Ulysses, Kansas area is added to read: Location: ULYSSES (Wichita Chart); Description: A circular area having a radius of 5 miles centered at lat. 37-42-30, long. 101-10-00; Altitudes: Surface to 7000' MSL; Time: Continuous; Using Agency: Bureau of Standards.

√UNAUTHORIZED LANDINGS AT GOOSE BAY, LABRADOR: It has been brought to our attention by the Canadian Government that United States registered aircraft have been making unauthorized landings at Goose Bay Airport, Labrador. This ariport is closed to civil aircraft except in emergency or when given special prior permission by the RCAF.

√CORRECTIONS TO FLIGHT INFORMATION MANUAL: Correct Flight Information Manual, Vol. 5, No. 2, dated June 15, 1951 as follows:

Page 11. Change Malden, Mo. INSAC telephone number to: 500.

OMNIRANGE USE: The effectiveness of the omnirange (VOR) depends upon proper use and adjustment of both the ground and airborne equipment. Certain minor irregularities may be observed in using VOR facilities, such as apparent course roughness, course deflections and/or limited distance range. Pilots flying over unfamiliar routes are cautioned to be on the alert for these apparent vagaries.

DISTRICT OF COLUMBIA-SPECIAL NOTICE: Attention must again be brought to pilots operating in the Washington National Airport Area regarding close adherence to the established traffic patterns. The CAA is receiving an alarming increased number of complaints regarding "Noise Nuisance" from communities in the vicinity, especially from Alexandria. It is felt that some of these complaints are justified in view of the many reports of low flying from communities some distance from the airport. The Administrator of Civil Aeronautics is desirous of having all pilots use the maximum permissable altitudes rather than the 1200' minimum in the proper pattern procedures on approaching Washington National Airport.
WASHINGTON-SPECIAL NOTICE: CAA regards Mt. Vernon National Monument as a congested area. In accordance with CAR 60.17 all acft should maint at least 1000' over Mt. ALWAYS CHECK NOTICES TO AIRMEN SECTION

AIR NAVIGATION RADIO AIDS

INSAC = Interstate Airway Communications Station (CAA).

VHF OMNI-RANGES: "Non-commissioned" VHF omni-ranges may lack certain items, such as monitoring or control equipment or may not have been flight-checked and are subject to shut-down at any time without notice. The courses may or may not be within the prescribed tolerances and the station is to be used accordingly.

VAR AND VOR MONITORING CLASSIFICATION FOR AIR TRAFFIC CONTROL PURPOSES: Category I (VAR) = Following conditions must be met: (A) The visual course alignment and signal level are monitored continuously. (B) The aural "A" or "N" sector signal is monitored continuously by the communicator at the associated INSAC. (C) The station identification is monitored continusouly by the communicator at the associated INSAC. (D) The aural course alignment is monitored at least once each hour by the communicator at the associated INSAC. Category I (VOR) = Course alignment and signal level are monitored continuously. NOTE: Category I indicated by parenthetical (1). Category II (VAR only) = If all except (D) of the conditions of Category are met. NOTE: Category II indicated by parenthetical (2). Category III = Facility monitored solely through use of automatic visual course and signal level monitor with automatic transfer unit. This category may permit VOR to be inoperative for a limited period before a notice to airmen is issued. Normally, VHF ranges which are not controlled by an INSAC, and located too distant from INSAC to be monitored with a VHF receiver will fall into Category III. NOTE: Category III indicated by parenthetical (3).

LEGEND

(A) = Air Force facility. (N) = Navy facility. (P) = Private facility
(g) = Tower equipped with 121.9 or 121.7 mc transmitter for control of ground traffic. (7-19) = Hours of operation, i.e., 0700-1900
(U) = Unmonitored, but usable for navigation (3) = Monitoring category
(B) = Blue Hemisphere; (Y) = Yellow hemisphere
→ = New or revised data
✓ = New facilities or name changes, see page 20

NOTE: Letters between range crs are quadrant identifiers, e.g., "90 YN 180" indicates the quadrant between the two crs is a yellow N quadrant. The letter immediately following a range crs indicates whether the course is aural or visual, i.e., "Y" or "B", for yellow or blue, indicates visual: "A" or "N", arual. In the case of low frequency ranges, the A or N cited between two courses is the identification to be heard in the quadrant between those two courses.

RADIO CLASS DESIGNATIONS

AC. . Approach Control Tower, CAA (transmits on voice channel of associated L/MF range or ILS in addition to frequencies listed)
B. . . . Scheduled Broadcast Station (broadcasts weather at 15 & 45 minutes after the hour; Air Force Broadcasts, generally, 29 minutes)
C. . . . Control Tower, CAA
CA. . . Control Tower, Air Force
CI. . . Control Tower (City, County, Private, etc.)
CN. . . Control Tower, Navy
D. . . . Distantly controlled
FM. . . VHF fan marker (100 watts)
GCA. . Ground Controlled approach system
H. . . . Non-directional radio beacon (homing), power 50 watts to less than 2000 watts
HH. . . Non-directional radio beacon (homing), power 2000 watts or more
ILS. . . Instrument Landing System (voice on localizer channel)
J. . . . L/MF (200 - 415 kc) voice facility on other than range frequency
LFM. . VHF fan marker, low powered (5 watts)
LMM. . Compass locator station when combined with middle marker of ILS
LOM. . Compass locator when installed at outer marker site or within 5.5 miles of middle marker
MH. . Non-directional radio beacon (homing) power less than 50 watts
ML. . Range (loop radiators), power less than 50 watts
MM. . VHF middle marker
MOR. . Low frequency omni-directional range
MRA. . Range (adcock, vertical radiators), power 50 or more, but less than 150 watts
MRL. . Range (loop radiators), power 50 or more, but less than 150 watts
OM. . . VHF outer marker
P. . . . Point-to-Point radio
RA. . . Range (adcock, vertical radiators), power 150 watts or more
RL. . . Range (loop radiators), power 150 watts or more
S. . . . Simultaneous (range signals and voice) type of transmitter
T. . . . Teletype
TX. . . Principal teletype
V. . . . Additional VHF voice feature on other then range frequency
VAR. . Visual-aural VHF range
VOR. . Omni VHF omni-directional range (omni-range)
W . . Without voice facilities on range frequency
Z. . . . VHF station location marker at a range station.

V = 135.9 and 135.0 mc transmitted.
# = Guards same VHF frequencies station transmits except 122.2 mc and 135.0 mc.
(1) = 3105,4495 kc guarded
(2) = 3105, 4495kc; 122.5 mc. This group of frequencies is group generally guarded by C.A.A. towers.
(3) = 3105,4495 kc; 122.1,126.7, 135.9 mc. This group of frequencies is group generally guarded by INSACS.
e.g., (3)-135.9, 122.1 = guards every frequency in group (3) except 135.9 and 122.1

NOTES

1. Range courses are magnetic inbearings.
2. All C.A.A. MH facilities operate continuously unless cited as follows: (on req)
3. All C.A.A. ranges operate continuously. Those which are not manned continuously are cited in the class column with hours of operation in parentheses, e.g., (6-24)
4. When a VOR or VAR is controlled by an associated LF range, because of space limitation, DTV is not included in the VHF range class.

ALWAYS CHECK NOTICES TO AIRMEN SECTION

RADAR AVAILABLE : How and Where

PAR = PRECISION APPROACH RADAR. ASR = AIRPORT SURVEILLANCE RADAR.
GCA = GROUND CONTROLLED APPROACH - MILITARY EQUIVALENT OF COMBINED ASR AND PAR EQUIPMENT

GROUND CONTROLLED APPROACHES - The only airborne equipment required for ground controlled approaches is a functioning radio transmitter and receiver. There are two types of ground controlled approaches - Precision and Surveillance (PPI).

PRECISION APPROACHES - Aircraft are guided to final approach to the designated instrument runway. The final approach flight path on a precision scope (PAR) is greatly expanded for increased accuracy and furnishes the controller with range, azimuth and altitude information. This permits the controller to accurately guide aircraft to touchdown on the runway.

SURVEILLANCE or PPI APPROACHES - Only the ASR scope is used and aircraft may be directed to any selected runway over approximately the same flight path the pilot would take if flying VFR. This scope furnishes range and azimuth information only. Since no altitude information is available to the controller, pilots must control their descent based on the glide angle desired, and the distance from the runway as furnished by the controller. Because ASR does not permit the same degree of accuracy as PAR, the weather minimums for this type of approach are at least as high as, and in some instances higher than, the regular circling minimums listed in the Flight Information Manual for the airport.

CAA RADAR UNITS - Operate continuously at the locations listed. Available to all pilots, civil and military. Contact associated CAA control tower on any frequency guarded for initial instructions, or in an emergency any CAA facility for information on nearest Radar Control. Weather minimums, associated runways and GCA procedures are listed in the Flight Information Manual.

AIR FORCE AND NAVY GCA UNITS - Available to civil pilots in emergency or by prior arrangement with C.O. of respective facility.

Contact under IFR: Pilots desiring GCA assistance during IFR conditions should call the nearest air traffic control facility (radio, airways, or tower, etc.) requesting GCA and further instructions.

Contact under VFR: VFR check-out of training flights should be arranged locally through Base Operations or the Control Tower.

Emergency: When receiver or transmitter difficulties exist, the tower may relay GCA approach instructions to the pilot, or the GCA operator may transmit, in blind, instructions for aircraft to make three hundred sixty (360) degree turns for identification. In either case, instructions will be followed at the pilot's discretion.

After being inoperative, GCA units require 20 to 30 minutes for warming up. Pilots should anticipate requirements for GCA in flight planning and request alerting of GCA units as far in advance as possible.

Civil minimums at military installations estabilshed by the CAA are 400' ceiling and 1 mile visibility except in emergency unless Air Force or Navy facility being used has higher minimums.

Navy units are prepared to transmit on HF from 2000 to 18,100 kc and receive any frequency from 1500 to 9050 kc to aid any plane in emergencv.

Alt MSL=Min. alt. over airport.

(D) = Day. (N) = Night. ➤=New or revised data. ✓ = New facilities or name changes.

ALWAYS CHECK NOTICES TO AIRMEN SECTION

CITY AND AIRPORT NAME

(AF) Airport name followed by city name in parenthesis (With AF in Type Column) - field owned or leased in whole by U.S. Air Force.

(AF) City and Airport Name (with C,I,M,MG or P in Type Column) - a civil airport with Air Force operations, reserve training, or other such acitvity thereon.

NOTE: Similar combinations of above two citations of A,N,CG, and NG indicate the same is applicable for Army, Navy, Coast Guard, and National Guard fields respectively.

(P) City and Airport Name - Civil Airport covered by an agreement between municipality and U.S. Government which permits use by transient military aircraft.

(PC) Same legal status as (P), but closed to all USAF pilots not possessing their own clearance authority in accordance with AFR 60-16.

* City, Site No., and Airway abbreviation - CAA intermediate field. Municipal airports with lights maintained by the CAA are listed similarly except there is no prefixed star.

NOTES:

1. MILITARY FIELDS ARE OPEN TO CIVIL AIRCRAFT ONLY BY PRIOR PERMISSION OF THE C.O. THEREOF. ALL AIRPORTS with C,I,M, or MG in type column are open to civil fliers.

2. USAF aircraft are permitted to use only those fields prefixed with an AF,A,N,NG,CG,P,PC or *.

3. When city and airport names are identical, the airport name is omitted to conserve space.

TYPE

AF	-Air Force	C	-Commercial	MG	-Misc. Govt
A	-Army (May also be used by Army Nat'l Guard)	CG	-Coast Guard	N	-Navy
		I	-Intermediate	NG	-Air Nat'l Guard
		M	-Municipal	P	-Private

LOCATION

The word "miles" has been eliminated because of space limitations. Mileage is that from the center of city to airport.

If orientation features are less than 1/2 mile from the field, distance is not specified

ELEVATION

Obviously, the effective length of a runway decreases with elevation above sea level. The C.A.A. formula for elevation correction is that a sea level runway length requirement must be increased 7% per 1000 feet of elevation above sea level. High temperatures also play an important role in reducing the effective length of runways.

NUMBER OF RUNWAYS

No differentiation is made between runways and strips as far as number of landing areas in field is concerned.

DIRECTORY OF AIRPORTS

LEGEND

LONGEST RUNWAY

FACILITIES

In this column are included the length and surfacing of the longest runway, the lighting and servicing facilities, and weather reports available.

RUNWAYS

The length of the longest paved runway or non-paved strip is stated in hundreds of feet. If the length is not prefixed, the surface is sod, clay, gravel, etc.

h - runway is paved (concrete, asphalt or similar type of paving)

aw - allway field

(26) - runway or strip length not verified by C.A.A.

LIGHTS

B: Rotating Light (Rotating beacon)
(Green and white, split-beam and other types)
Omission of B indicates rotating light is either not available or not operating standard hours (sunset-sunrise).

NOTE: Code lights are not codified, and are carried in Remarks Column.

L: Field Lighting

- L - by itself indicates temporary lighting, such as flares, smudge pots, lanterns.
- 1 - Portable lights (Electrical)
- 2 - Boundary
- 3 - Runway floods
- 4 - Runway or Strip
- 5 - Instrument approach (neon)
- 6 - High intensity runway
- 7 - High intensity instrument approach

* An asterisk preceding an element indicates that it operates on prior request only (by phone call, telegram or letter). Where the asterisk is not shown, the lights are in operation or available sunset to sunrise by request (circling the field or radio call).

Because the obstructions on virtually all lighted fields are obstruction lighted, obstruction lights have not been included in the codification.

SERVICING

S1: Storage
S2: Storage, minor aircraft repairs
S3: Storage, minor aircraft, and minor engine repairs
S4: Storage, major aircraft, and minor engine repairs
S5: Storage, major aircraft, and major engine repairs

NOTE: Any S combination without parenthesis indicates only full-time day attendant. Fields having lighting facilities may have 24 hours attendant available.
Any S combination in parenthesis-part time or irregular attendant.

WEATHER

W: Weather reports available from Weather Bureau or C.A.A. communications station on field.

FUEL OCTANE

Civil Fuel:

F1: 80 oct., at least
F2: 87 oct., and lower
F3: 91 oct., and lower
F4: 100 oct., and lower

NOTE: If only one octane available, this octane cited, and not coded.
Any F combination without parenthesis indicates full time day attendant, in parenthesis part-time or irregular attendant.

REMARKS

(a) "INACTIVE" indicates usable civil field, but not being operated, at last inspection. Caution advised.

(b) "CLOSED" indicates closed to all traffic except in emergency.

(c) "OFL BUS ONLY" indicates closed to all transient military aircraft except on official business or in emergency. U.S. Aircraft require written orders. "AF OFL BUS ONLY" or "NAVY OFL BUS ONLY" indicates applicability of restriction only to Service indicated.

(c) "INACT - NO FACS" indicates AF airfields used exclusively by the USAF or municipal fields used jointly by the USAF and civil interest at which both USAF and civil interest are inactive; these will be available to military aircraft at the discretion of the Commanding Officer of the organization to which aircraft are assigned.

(e) "CIVIL FACS ONLY" indicates municipal fields under joint control or ownership of the USAF and/or Navy and civil interests at which no USAF or Navy facilities are available. Such fields may be used by military aircraft; however, only commercial service is available.

(f) "LIMITED USE" indicates some special restriction on use of field which will be listed in Notices to Airmen section of Airman's Guide.

(g) "ABANDONED" indicates reverted to non-airport usage such as farming or grazing.

(h) "REPORTED ABANDONED" indicates an airport reported abandoned but not verified as such by C.A.A.

(i) "FEE" indicates landing charges for private or non-revenue producing aircraft. In addition, fees may be charged for planes that remain over a couple of hours and buy no services, or at major airline terminals for all aircraft.

(j) "Blkd" indicates approaches where glide angle to runway is 3:1 or less.

(k) "Rgt tfc N" indicates right turns should be made on landings and take-offs to N.

(l) "A,B" indicates Air Force or Navy fuel. See Fuel Octane column.

NOTES

1. → New or revised data.
2. SCHEDULED AIRLINE STOP airport names are capitalized.
3. PRIVATE AIRPORTS: Usually unattended, offer no public service and solicit no public patronage. Such fields are listed primarily because of their possible utility as emergency landing areas. Use of these fields is at the risk of the user. No "S" or "F" combination is ever assigned these fields.
4. OBSTRUCTIONS: Because of space limitations only the more dangerous obstructions are indicated. Natural obstructions, like trees, for example, clearly discernible for contact operations, are frequently omitted. On the other hand, all pole lines within at least 15:1 glide angle are indicated.
5. NEW AIRPORTS: At the end of each state, under this heading will be found, out of alphabetical alignment, all the new airports tabulated after the type for that state had been originally set up.

NOTICES TO AIRMEN

SPECIAL NOTICES

NAVY SPECIAL NOTICES

NAVY DATA: In accordance with Hydrographic Office Memorandum for Aviators, No. 17, September 17, 1948, before any changes or modifications of any aid to air navigation, such as realignment of radio ranges, modified instrument approach procedures, relocation of fan markers, etc., can be published by the Hydrographic Office, the Command requesting the change must first obtain approval from the Office of Chief of Naval Operations, Navy Department, Washington 25, D. C. When an approved change or modification has been made to any aid to air navigation, the Command shall immediately notify the U. S. Navy Hydrographic Office, Division of Air Navigation, Washington 25, D. C.

All Naval Air Stations and Air Facilities are directed to notify the U. S. Navy Hydrographic Office, Division of Air Navigation, Washington 25, D. C., direct, of all contemplated or immediate changes in their field facilities, operation rules, air-ground communication facilities, GCA, etc., and other factors affecting safe operation of aircraft which do not necessitate approval from CNO. This may be done by letter, speedletter, or dispatch, as applicable.

In accordance with Chief of Naval Operations Aviation Circular Letter 19-49 March 2, 1949, approval for the closing of any Navy or Marine Corps Air Station or Air Facility to transient military aircraft for a period in excess of ten days must be obtained from the Chief of Naval Operations.

Commanding Officers of Naval and Marine Corps aviation activities are directed to review all information published by the Hydrographic Office, U. S. Air Force, Civil Aeronautics Administration, and Coast and Geodetic Survey on facilities under their command and immediately forward any corrections or approved amendments direct to the publishing agency. A copy of the corrections or amendments to information published by other agencies should be forwarded to the Hydrographic Office The charts and publications issued by the above-mentioned agencies must be currently maintained in order that all aviators can be kept informed of changes to airfields, seaplane anchorages, navigational aids, and other factors affecting the safe operation of aircraft.

AIR FORCE SPECIAL NOTICES

AIR FORCE DATA. Advice covering Air Force fields or Air Force operations on civil fields, or Air Force radio facilities, and also Air National Guard fields and facilities should be forwarded to: Commanding Officer, USAF Aeronautical Chart & Information Service, Washington 25, D C.; Attn: Aeronautical Information Division.

Requests for approval of the closing of Air Force airfields or restrictions in airfield facilities to transient military aircraft for over ten days should be forwarded through channels to Headquarters, U. S. Air Force Restrictions in Air National Guard fields or facilities will be forwarded to the National Guard Bureau through the State Adjutant General for approval. Information to be published will be coordinated and submitted to the Civil Aeronautics Administration by Headquarters USAF ACIS.

In connection with the above, the attention of all base operations officers is invited to A. F. Regulation 55-12 of July 1, 1949, subject, "Notices to Airmen", A. F. Regulation 5-16 of February 20, 1948, subject, "Responsibilities for Flight Publications", and to A. F. Regulation 60-23 of September 23, 1947, subject, "Restrictions on Landing at Army Airfields".

AIR FORCE OFFICIAL BUSINESS: Air Force official business within the meaning of Air Force Regulation 85-2 is interpreted as the necessity for personnel aboard an aircraft to contact personnel, units, or organizations at or near the airfield selected for landing for the purpose of conducting transactions in the service of, and in the interest of, the United States Government. This does not include the use of an airfield by transient aircraft for the purpose of obtaining clearance, service, or other items attendant to itinerant operations. Cross country flights for the purpose of maintaining flying proficiency are not considered to be official business within the meaning of this regulation.

*Headquarters, USAF has directed following utilization only for communications as listed with a view to eliminating congestion; Channel A: IFR flight and such other traffic as required by CAA; Channel B: Immediate aircraft movements within control zone of airport; Channel C: Routine IFR and VFR flights and "company business".

**In 4 channel equipment (ARC-5 and SCR-522) 132.3 mc or 142.02 mc may be substituted on Channel C and D in accordance with operational requirements.

UTILIZATION OF CAA VAR STATIONS BY MILITARY AIRCRAFT: The attention of pilots is directed to the fact that voice facilities are available at many VAR stations (see pages 90 thru 103, A. N. 08-15-1), and CAA communications stations are located thereat. Such VAR facilities should be utilized for navigational aid and communications services, particularly when standard low frequency facilities are not available.

SPECIAL CHARTS OF ATOMIC ENERGY AIRSPACE RESERVATIONS: The Atomic Energy Commission has issued a special chart depicting airspace reservations in the United States. Copies of this chart are being supplied each Air Force Base, AF Reserve Unit, National Guard Unit and other activities on the same mailing list basis as used for Airman's Guide. Operations officers should prominently display this chart and assure that pilots contemplating flight adjacent to these areas are briefed upon their existence, location and restricted status.

✓ Indicates new or revised Special Notices

AIR FORCE FOREIGN CLEARING STATIONS: Under the authority of Air Force Regulation 60-8 of July 6, 1949, U. S. Air Force aircraft with destinations listed below or returning therefrom to the United States will clear through the stations indicated:

AFRICA and AZORES: Brookley AFB, Ala.; MacDill AFB, Fla.; Washington National Airport, D. C.; or Westover AFB, Mass.

ALASKA: McChord AFB, Wash.; Great Falls AFB, Mont.; or Travis AFB, Calif.

BERMUDA: Mitchel AFB, N. Y.; Brookley AFB, Ala.; MacDill AFB, Fla.; Washington National Airport, D. C.; Travis AFB, Calif.; or Westover AFB, Mass.

CANADA: Great Falls AFB, Mont.; Brookley AFB, Ala.; McChord AFB, Wash.; Washington National Airport, D. C.; Selfridge AFB, Mich.; Westover AFB, Mass.; or Mitchel AFB, N. Y.

CANAL ZONE, CENTRAL AMERICA, MEXICO, AND SOUTH AMERICA: MacDill AFB, Fla.; Kelly AFB, Texas; Brookley AFB, Ala.; Washington National Airport, D. C. March AFB, Calif.

CARIBBEAN: Brookley AFB, Ala.; Kelly AFB, Texas; MacDill AFB, Fla.; Washington National Airport, D. C.

ENGLAND, GREENLAND, ICELAND, AND NORTH IRELAND: Washington National Airport, D. C.; or Westover AFB, Mass.

EUROPEAN THEATER: Brookley AFB, Ala.; MacDill AFB, Fla.; Washington National Airport, D. C.; Westover AFB, Mass.; or Kelly AFB, Texas.

HAWAII: Travis AFB, California.

NOVA SCOTIA and NEWFOUNDLAND: Washington National Airport, D. C.; Westover AFB, Mass.; Selfridge AFB, Mich.; Brookley AFB, Ala.; or Mitchel AFB, New York.

The classified "Foreign Clearance Information Guide", published by Aeronautical Chart and Information Service and now distributed to all Air Force bases should be consulted prior to departure for foreign clearing station, particularly with regard to diplomatic requirements for country for which clearance is desired, in order that appropriate advance notice of flight may be given and delay at foreign station may be avoided.

CURRENT FEDERAL AIRWAYS MANUALS OF OPERATION: The following publications are now distributed in accordance with AF Regulation 5-12, and supersede listing given in paragraph 5 of this regulation. Base operations officers, weather and communication units should check copies in use to insure that latest issues and all revisions are available. Mailing lists are now maintained in accordance with groupings of material as follows:

GROUP I MATERIAL: II-B. Instructions for the Operation of Communications Facilities, First Edition, January 15, 1950 (This replaces II-B-2, II-B-3, II-B-5, II-B-7, II-B-8 and II-B-11); M-59, November 5, 1949 (Service "B").

GROUP II MATERIAL: Location Identifiers, Fourth Edition, July 1, 1950, with two revisions.

GROUP III MATERIAL: Contractions, Fifth Edition, December 1, 1949.

GROUP IV MATERIAL: Civil Airways Mileage Chart of Dec. 27, 1950.

GROUP V MATERIAL: Teletype Service "A" Manual, September 19, 1950; Teletype Service "C" Manual, January 9, 1951; Teletype Maps: M-11 December 1, 1949, and M-14, April 15, 1950 (Service "A"); M-10, October 1, 1949, and M-13, November 1, 1950 (Service "C"); M-58, August 15, 1950 (Service "A", "C", and "O").

GROUP VI MATERIAL: Teletype Service "O" Manual, May 1, 1950, with Revision 6. (Revisions 1-5 obsolete). Teletype Maps M-89, February 1, 1950 (Service "O") and M-58 (Service "A", "C" and "O").

Requests for distribution should be directed to Commanding Officer, Aeronautical Chart and Information Service, Washington 25, D. C. Attn: Aeronautical Information Division.

NEW USAF POLICY REGARDING USE OF INACTIVE FIELDS: In accordance with directive from Headquarters, USAF, Air Force fields which are on inactive status and are listed in the Directory as "INACT-NO FACS" will in the future be closed to all USAF pilots not possessing their own clearance authority in accordance with AFR 60-16, unless on official business with written orders.

COMPULSORY REPORTING POINTS- VAR RANGE FACILITIES: VAR Facilities designated by CAA and shown on radio facility charts as Compulsory Reporting Points will be applicable to USAF aircraft only if the aircraft is equipped with the necessary instruments and radio frequencies and if a flight plan has been filed with ATC declaring the intention to utilize these facilities. When ATC clearances include instructions using these facilities and the aircraft is not equipped for such use, the pilot should so advise the traffic control agency and request amended traffic control instructions.

UHF CHANNELIZATION: An initial UHF channelization plan has been approved for USAF and USN UHF-equipped aircraft in the U. S. and will be published in subsequent issues of the Radio Facility Charts. UHF frequencies which are being first implemented at USAF stations on a continuing program beginning 1 July 1951 are:

Channel 1	Control tower (military primary)	236.6 mc
" 15	Military Airways	258.20 mc
" 17	GCA	335.80 mc
" 18	GCA	289.40 mc
Guard	Military emergency	243.00 mc

CAA stations, towers and centers will provide service on UHF. Channels to be used and date services will be availalbe will be found in the Notices To Airmen Section.

CIVIL SPECIAL NOTICES

CIVIL DATA: The Airman's Guide covers primarily two broad fields of civil airport information, namely so-called permanent data changes and temporary hazardous conditions. Permanent airport data refer to new airports or changes in field layout or servicing, lighting or permanent obstructions on existing airports. Temporary hazardous conditions refer to conditions that make such airports temporarily unusable or usable only with caution. Such hazardous conditions could be, for example, a field closed because of floods, spring thaws, or construction, or merely a burned-out obstruction light or runway partially unusable because of construction.

Obviously, temporary hazardous conditions should be reported to the aeronautical public at once. The necessity for reporting additional aids or minor changes in existing aids however, isn't nearly as cogent. In other words, a temporarily closed airport is ordinarily of much more importance from a safety viewpoint than is a new airport, and the aeronautical public should be told about it as expeditiously as possible. (11-19-51)

Notamizing of advice covering a field unusable because of flood or snow, a runway closed because of construction, or the erection of a pole-line in an approach, doesn't necessitate an engineering background on the part of the reporter. Too, safety frequently necessitates the notamizing of such advice before an official check can be made. On the other hand, advice covering permanent airport data changes, such as a new airport, or a lengthened landing strip, or an additional hangar, obviously doesn't require the same expeditious transmission to the aeronautical public, and the data may be checked from an engineering standpoint and for standardization before being publicized.

SUMMATION: (a) Since the aeronautical public should be immediately advised on hazardous conditions, reporters should utilize the CAA Airway Communications Stations. The item to be reported, therefore, should either be telephoned or mailed to the nearest communications station for dissemination as a notam and for further transmission to the publishers of the Airman's Guide. (If this is not feasible the items should be reported directly to the Office of Aviation Development, Attention: W-155, Washington 25, D.C.)

(b) Permanent airport data changes (as differentiated from temporary hazardous conditions) should be reported to the appropriate C.A.A. District Airport Engineer for coordination before they are included in the Airman's Guide.

CIVIL USAGE OF MILITARY FIELDS: U.S. Air Force and Navy fields are open to civil fliers only in emergency or with prior permission of the commanding officers thereof.

DIRECTORY OF AIRPORTS AND AIR NAVIGATION RADIO AIDS NOTAMS: Because of space limitation, the Airport Directory and Air Navigation Radio Aids perforce serve as a notam supplement. Notam data revising a previous Directory or ANRA are indicated by prefixed arrows. The only airport or radio data (other than temporary conditions of short duration) carried in the Notices to Airmen Section are facility coordinates, post-deadline data or data impossible to incorporate in the two above tabulations.

DIRECT COMMUNICATIONS WITH AIR ROUTE TRAFFIC CONTROL CENTERS: The CAA has inaugurated a procedure whereby pilots operating on IFR flight plans may have direct communication with air route traffic controllers at certain control centers. VHF on a simplex basis (call-up and reply on the same frequency) is used. This enables the controller to issue traffic clearances and receive indications of compliance therewith in such a manner that all air traffic is expedited. The center will guard the assigned frequency. However, each specific aircraft, with which the center desires to establish direct communication for control purposes, will receive a clearance through the appropriate CAA, AACS or Air Carrier Communications Station, indicating the time or place the controller desires to communicate directly with the pilot.

The locations at which this direct communications procedure is available are listed in the Air Navigation Radio Aids Section of the Airman's Guide. Each one is listed alphabetically following the tower listing.

VERY HIGH FREQUENCIES FOR PRIVATE PILOTS: Use of very high frequency channels by the majority of private pilots has heretofore been limited to the channels 121.5, 122.1, 122.5 and 122.8 mc. Now, however, any private pilot having need for additional channels may apply to the FCC for use of any of the 40 channels in the 118.1 to 126.7 mc band. To determine their additional requirements, pilots should consult the Airman's Guide (Radio Facilities Section) or contact the nearest CAA regional office for information concerning the channels which have been implemented at the various locations. Of particular interest may be the channel 126.7 mc which was previously limited to use by air carriers for communication with CAA stations (INSACS) but now may be used by any private pilot if required for that purpose.

DVFR FLIGHT PLANS: When an IFR flight plan is canceled, a DVFR flight plan should be filed if the provisions of Part 620 of the Regulations of the Administrator will be applicable to any portion of the remainder of the flight.

AERONAUTICAL ADVISORY STATIONS (FREQUENCY 122.8 mc): This requency is known in some areas as the "private flyers frequency" and also as "UNICOM". Licenses for ground stations and aircraft are now being issued by the FCC subsequent to receipt of application for license from private pilots and airport operators eligible to use the frequency. Under the FCC rules, private aircraft may use 122.8 mc for communication with aeronautical advisory stations and between private aircraft themselves while in flight. Particular attention is invited to Section 9.1001 which follows:

"9.1001 Eligibility for station license. Authorizations for aeronatuical advisory stations will be issued only to the owner or operator of a landing area, not served by an airdrome control station. Only one Aeronautical Advisory station will be authorized at a landing area".

The scope of service to be rendered under FCC rules for the ground station is:
"9.1004 Scope of service. (a) Communications shall be limited to the necessities of safe and expeditious operation of aircraft. The service shall be advisory in nature, pertaining to the condition of runways, types of fuel available, wind conditions, available weather information or other information necessary for aircraft operations. (b) Aeronautical Advisory stations shall not be used for the control of aircraft."

The following locations have been reported as having Aeronautical Advisory Service available:

Bloomsburg Arpt, Pa. (0800-2300)
Claremont Arpt, N. H. (daylgt hrs)
Concord Arpt, N. H. (daylgt hrs)
Davenport Arpt, Iowa (0730-2000)

Airport operators interested in providing this service may obtain further details from the nearest FCC or CAA field office.

AIR TRAFFIC CLEARANCES: The initial traffic clearance issued to an aircraft prior to departure will normally authorize flight to the point of first intended landing, with instructions to maintain the altitude at which the aircraft enters the next control area. The pilot should request any desired altitude changes en route. Better service can be given the pilot if any altitude change is requested at the time the change is desired. An amendment to the initial clearance may be issued to a flight at any time the air traffic controller deems such action necessary to avoid possible confliction between en route, landing, or departing aircraft. A flight is always cleared to a specific point or location (radio or visual reporting point), defined as a clearance limit. If the assigned altitude is below the minimum for a subsequent portion of the flight and radio failure is experienced, the procedures outlined under TWO-WAY RADIO FAILURE must be followed to insure proper terrain clearance.

Whenever an aircraft has been cleared to a point other than the destination airport it is the responsibility of Air Traffic Control to issue whatever further clearance is appropriate at least five minutes before the aircraft arrives at the clearance limit, unless holding instructions and a time at which the pilot may expect further clearance have been received and acknowledged by the pilot. In the event a pilot arrives at a clearance limit without having received either a clearance beyond or holding instructions at such fix, he should immediately request further clearance and hold at the clearance limit, maintaining the last assigned altitude, until further clearance is received. When a clearance limit is a point other than the destination airport, the altitude of the aircraft at this clearance limit will be protected so that separation will exist in the event the aircraft must hold awaiting further clearance.
NOTE: The foregoing should not be construed as being related in any way to the procedures which apply when a two-way radio failure occurs.

INSAC VHF REPLY TO PRIVATE AIRCRAFT: The new national gound-to-air call-up and reply channel for communication with private aircraft, 122.2 mc was implemented at certain INSACs on August 1, 1951. Eventually, all INSACs will transmit on 122.2 mc but in the meantime VHF reply to private aircraft will be furnished on the VHF range voice channel at INSACs which have not yet commissioned 122.2 mc. Pilots should consult the Airman's Guide and current NOTAMS for information on on frequencies available at specific stations. The frequency upon which the pilot expects reply should be specified in the initial call. When an INSAC is unable to reply on the VHF range voice channel because of equipment failure or maintenance shutdown, reply will be made on 121.5 mc. A small number of INSACs have not yet installed transmitting service on 121.5 mc. At these locations, the reply on 121.5 mc will be made by an adjacent control tower. Therefore, when a pilot calling such station has reason to believe that the VHF range voice channel is not operating, he should request reply on 121.5 mc.

TRANSMISSION OF "V" BY VAR RANGES: Effective on or about November 15, 1951, the letter "V" will be transmitted by all VAR ranges. It will precede the usual location identifier and be separated from it by a short space. It is intended to enable pilots to distinguish instantly between the aural directional signals of VHF ranges, and those of low or medium frequency ranges located in the same general area. It will, for example, guard against the possibility of an error occuring through accidental connection of a pilot's headset to the wrong receiver. The "V" will be transmitted at an appreciably higher rate of speed than the location identifier.

√UNAUTHORIZED LANDINGS AT GOOSE BAY, LABRADOR: It has been brought to our attention by the Canadian Government that United States registered aircraft have been making unauthorized landings at Goose Bay Airport, Labrador. This airport is closed to civil aircraft except in emergency or when given special prior permission by the RCAF.

√USE OF OMNIRANGE: Airmen are requested to assist the CAA and the Radio Technical Commission for Aeronautics in confirming the practicability of operating VOR facilities 100 kc apart with a geographical spacing of only 130 statute miles. The Lynchburg, Va., VOR operates on 116.1 mc and the Washington National Airport TVOR operates on 116.2 mc. If interference is noted between these facilities it is requested that you notify the CAA, Washington 25, D. C., including information as to the altitude and distance at which interference is first noted, the make of omnireceiver in use, which station is causing the interference, and the manner in which the interference manifests itself.

√CORRECTION TO THE FLIGHT INFORMATION MANUAL: Correct Flight Information, Vol. 5, #2, dated June 15, 1951, as follows: Page 26. Delete the paragraph entitled "Approach Time" and after the paragraph entitled "Essential Traffic Information", insert the following:

EXPECTED APPROACH TIME - The time at which it is expected that an arrival will be cleared to commence its approach procedure preparatory to landing.

√INSTRUMENT APPROACH PROCEDURES: The standard instrument approach procedures for the following airports have been CANCELLED: Low Frequency Radio Range: Camarillo, Calif., Point Mugu NAS, effective Oct. 5, 1951; Milford, Utah, Milford Arpt., effective Oct. 31, 1951; Utica, N. Y., Utica Arpt., effective Oct. 23, 1951. Automatic Direction Finding: Portland, Oreg., Portland Arpt, effective Oct. 22, 1951.

√CORRECTION TO AERONAUTICAL CHARTS: Correct WAC-522 by adding the Laredo, Texas control area extension: From the Laredo, Texas rng extending 5 miles either side of the NW crs of the rng to 20 miles NW of the rng and within 5 miles either side of the SE crs of the rng extending 25 miles SE of the rng, excluding that portion which lies outside of the United States.

√NON-STANDARD HOLDING PATTERNS: Effective immediately the following non-standard holding patterns are established:

(1) Holding point - Augusta, Ga. ILS LOM; Direction: South; Turns: Left; Time: Two minutes.

(2) Holding point - Augusta Ga. VOR; Direction: 310°; Turns: Left; Time: two minutes.

(3) Holding point - Binfield, Tenn. H Fac; Direction: SW; Turns: Left; Time: two minutes.

(4) Holding point - High Point, N. C. FM; Direction: SE; Turns: Left; Time: two minutes.

(5) Holding point - Winston Salem, N. C. ILS LOM; Direction: SE; Turns: Left; Time: two minutes.

√ON-REQUEST REPORTING POINTS: Effective immediately the following on-request reporting points are established:

(1) Lanesville, Indiana - Intersection of the W crs of the Louisville, Ky. LF rng and a bearing of 172° mag to the Godman Rdo Bcn.

(2) Shepherdsville, Ky - Intersection of the S crs of the Louisville, Ky. LF rng and a bear. of 262° mag. to the Godman Rdo Bcn.

(3) Upton, Ky. - Intersection of the NE crs of the Bowling Green, Ky. LF rng and a bear. of 349° mag. to the Godman Rdo Bcn.

(4) Stamping Ground, Ky. - Intersection of E crs of the Louisville, Ky. LF rng and a bear. of 178° mag. to the Lexington, Ky. "H" fac.

(5) Georgetown, Ky. - Intersection of E crs of the Louisville, Ky. LF rng and a bear. of 196° mag. to the Lexington, Ky. "H" fac, or - Intersection of E crs of the Louisville, Ky. LF rng and the 350° radial of the Lexington, Ky. VOR rdo rng.

(6) Belle, W. Va. - Intersection of SE crs of the Charleston, W. Va. VAR and a bear. of 360° mag. to outer mrkr compass lctr of the Charleston, W. VA. Instrument Landing Sys.

(7) Scotland Intersection - Intersection of the SE crs of Newark, N. J. rng and the SW crs of the Idlewild, N. Y. rng. (The preceeding intsxn was formerly named Riis Park.)

√DANGER AREAS: The following Danger Area amendments shall be effective as dated unless otherwise advised:

AMENDMENT NO. 3 to PART 608 - DANGER AREAS
(November 16, 1951)

In Section 608.30 a Sault Sainte Marie, Mich. temporary area is added to read: Location: SAULT SAINTE MARIE (WAC 262,263,264,309,310,311,356,357,358); Description: N boundary: lat. 46-00-00; S boundary: lat. 36-00-00; E boundary: long. 68-00-00; W boundary: long. 84-00-00, excluding those portions of the area lying within Canada or extending more than 3 nautical miles from the shoreline of the United States; Altitudes: 19,000 ft to unlimited; Time: 0600 EST, November 16, 1951 through 0600 EST November 17, 51; Using Agency: Commanding General, Air Defense Command, Colorado Springs, Colo.

AMENDMENT NO. 4 to PART 608 - DANGER AREA
(November 24, 1951)

(1) In Section 608.18, the Tyndall Air Force Base, Panama City, Fla. AREA I, published on Oct. 31, 51 in 16 F. R. 11066, is amended by changing the "Description by Geographical Coordinates" column to read: "Beginning at lat. 30-43-00, long. 85-14-00; SE to lat. 29-55-00, long. 84-32-00; SW to the westerly end of Dog Island at lat. 29-47-00, long. 84-40-00; SSE to a point 3 nautical miles from the shoreline at lat. 29-43-45, long. 84-39-00; westerly paralleling the shoreline at a distance of 3 nautical miles to lat. 30-04-20, long. 85-45-45; NW to lat. 30-42-00, long. 86-06-00; easterly to lat. 30-43-00, long. 85-14-00, point of beginning.

(2) In Section 608.39, the Deming, N. M. area published on Oct. 31, 51, in 16. F. R.11066, is amended by changing the "Designated Altitudes" column to read: "Surface to 50,000 ft."

(3) In Section 608.51, the Matagorda Island, Texas AREA II, published on Oct. 31, 51, in 16. F. R. 11066, is amended by changing the "Designated Altitudes" column to read: "Surface to 50,000 ft", and by changing the "Time of Designation" column to read: "Continuous".

(4) In Section 608.51, the Midland, Texas area published on Oct. 31, 51, in 16 F. R. 11066, is amended by changing the "Designated Altitudes" column to read: "Surface to 50,000 ft."

AMENDMENT NO. 5 to PART 608 - DANGER AREAS
(November 27, 1951)

(1) In Section 608.28, the Aberdeen, Md. area published on Oct. 31, 51, in 16 F. R. 11066, is amended by changing the "Using Agency" column to read: "Edgewood Arsenal, Md. (Flights through danger area on Red Civil Airway No. 17 authorized only after obtaining prior approval from Civil Aeronautics Administration, Air Traffic Control)."

(2) In Section 608.62, the Island of Kahoolawe, Territory of Hawaii, area published on Oct. 31, 51, in 16 F. R. 11066, is amended by changing the "Description by Geographical Coordinates" column to read: "The airspace over the Island of Kahoolawe and the surrounding water area within 1 nautical mile of the island and excluding that portion overlapped by Red Civil Airway No. 87".

DISTRICT OF COLUMBIA-SPECIAL NOTICE: Attention must again be brought to pilots operating in the Washington National Airport Area regarding close adherence to the established traffic patterns. The CAA is receiving an alarming increased number of complaints regarding "Noise Nuisance" from communities in the vicinity, especially from Alexandria. It is felt that some of these complaints are justified in view of the many reports of low flying from communities some distance from the airport. The Administrator of Civil Aeronautics is desirous of having all pilots use the maximum permissable altitudes rather than the 1200' minimum in the proper pattern procedures on approaching Washington National Airport.
WASHINGTON-SPECIAL NOTICE: CAA regards Mt. Vernon National Monument as a congested area. In accordance with CAR 60.17 all acft should maint at least 1000' over Mt. ALWAYS CHECK NOTICES TO AIRMEN SECTION

AIR NAVIGATION RADIO AIDS

INSAC = Interstate Airway Communications Station (CAA).

VHF OMNI-RANGES: "Non-commissioned" VHF omni-ranges may lack certain items, such as monitoring or control equipment or may not have been flight-checked and are subject to shut-down at any time without notice. The courses may or may not be within the prescribed tolerances and the station is to be used accordingly.

VAR AND VOR MONITORING CLASSIFICATION FOR AIR TRAFFIC CONTROL PURPOSES: Category I (VAR) = Following conditions must be met: (A) The visual course alignment and signal level are monitored continuously. (B) The aural "A" or "N" sector signal is monitored continuously by the communicator at the associated INSAC. (C) The station identification is monitored continuously by the communicator at the associated INSAC. (D) The aural course alignment is monitored at least once each hour by the communicator at the associated INSAC. Category I (VOR) = Course alignment and signal level are monitored continuously. NOTE: Category I indicated by parenthetical (1). Category II (VAR only) = If all except (D) of the conditions of Category are met. NOTE: Category II indicated by parenthetical (2). Category III = Facility monitored solely through use of automatic visual course and signal level monitor with automatic transfer unit. This category may permit VOR to be inoperative for a limited period before a notice to airmen is issued. Normally, VHF ranges which are not controlled by an INSAC, and located too distant from INSAC to be monitored with a VHF receiver will fall into Category III. NOTE: Category III indicated by parenthetical (3).

LEGEND

(A) = Air Force facility. (N) = Navy facility. (P) = Private facility
(g) = Tower equipped with 121.9 or 121.7 mc transmitter for control of ground traffic. (7-19) = Hours of operation, i.e., 0700-1900
(U) = Unmonitored, but usable for navigation (3) = Monitoring category
(B) = Blue Hemisphere; (Y) = Yellow hemisphere
→ New or revised data
✓ New facilities or name changes, see page 20

NOTE: Letters between range courses are quadrant identifiers, e.g., "90 YN 180" indicates the quadrant between the two courses is a yellow N quadrant. The letter immediately following a range course indicates whether the course is aural or visual, i.e., "Y" or "B", for yellow or blue, indicates visual: "A" or "N" aural. In the case of low frequency ranges, the A or N cited between two courses is the identification to be heard in the quadrant between those two courses.

RADIO CLASS DESIGNATIONS

AC. . . Approach Control Tower, CAA (transmits on voice channel of associated L/MF range or ILS in addition to frequencies listed)
B. . . . Scheduled Broadcast Station (broadcasts weather at 15 & 45 minutes after the hour; Air Force Broadcasts, generally, 29 minutes)
C. . . . Control Tower, CAA
CA. . . Control Tower, Air Force
CI. . . Control Tower (City, County, Private, etc.)
CN. . . Control Tower, Navy
D. . . . Distantly controlled
FM. . . VHF fan marker (100 watts)
GCA. . Ground Controlled approach system
H. . . . Non-directional radio beacon (homing), power 50 watts to less than 2000 watts
HH. . . Non-directional radio beacon (homing), power 2000 watts or more
ILS. . . Instrument Landing System (voice on localizer channel)
J. . . . L/MF (200-415 kc) voice facility on other than range frequency
LFM. . VHF fan marker, low powered (5 watts)
LMM. . Compass locator station when combined with middle marker of ILS
LOM. . Compass locator when installed at outer marker site or within 5.5 miles of middle marker
MH. . . Non-directional radio beacon (homing) power less than 50 watts
ML. . . Range (loop radiators), power less than 50 watts
MM. . . VHF middle marker
MOR. . . Low frequency omni-directional range
MRA. . Range (adcock, vertical radiators), power 50 or more, but less than 150 watts
MRL. . Range (loop radiators), power 50 or more, but less than 150 watts
OM. . . VHF outer marker
P. . . . Point-to-Point radio
RA. . . Range (adcock, vertical radiators), power 150 watts or more
RL. . . Range (loop radiators), power 150 watts or more
S. . . . Simultaneous (range signals and voice) type of transmitter
T. . . . Teletype
TX. . . Principal teletype
V. . . . Additional VHF voice feature on other than range frequency
VAR. . Visual-aural VHF range
VOR. . Omni VHF omni-directional range (omni-range)
W. . . Without voice facilities on range frequency
Z. . . . VHF station location marker at a range station.

FREQUENCY LEGEND

V = 135.9 and 135.0 mc transmitted.
# = Guards same VHF frequencies station transmits except 122.2 mc and 135.0 mc.
(1) = 3105, 4495 kc guarded
(2) = 3105, 4495 kc; 122.5 mc. This group of frequencies is group generally guarded by C.A.A. towers.
(3) = 3105, 4495 kc; 122.1, 126.7, 135.9 mc. This group of frequencies is group generally guarded by INSACS.
e.g., (3)-135.9, 122.1= guards every frequency in group (3) except 135.9 and 122.1
/ = Transmitting frequencies/ guarding frequencies.

NOTES

1. Range courses are magnetic in-bearings.
2. All C.A.A. MH facilities operate continuously unless cited as follows: (on req)
3. All C.A.A. ranges operate continuously. Those which are not manned continuously are cited in the class column with hours of operation in parentheses, e.g., (6-24)
4. When a VOR or VAR is controlled by an associated LF range, because of space limitation, DTV is not included in the VHF range class.

Pilots are requested to indicate when calling C.A.A. airway communications stations and control towers the frequency on which the reply is expected.

ALWAYS CHECK NOTICES TO AIRMEN SECTION

RADAR AVAILABLE : How and Where

PAR = PRECISION APPROACH RADAR. ASR = AIRPORT SURVEILLANCE RADAR.
GCA = GROUND CONTROLLED APPROACH - MILITARY EQUIVALENT OF COMBINED ASR AND PAR EQUIPMENT

GROUND CONTROLLED APPROACHES - The only airborne equipment required for ground controlled approaches is a functioning radio transmitter and receiver. There are two types of ground controlled approaches - Precision and Surveillance (PPI).

PRECISION APPROACHES - Aircraft are guided to final approach to the designated instrument runway. The final approach flight path on a precision scope (PAR) is greatly expanded for increased accuracy and furnishes the controller with range, azimuth and altitude information. This permits the controller to accurately guide aircraft to touchdown on the runway.

SURVEILLANCE or PPI APPROACHES - Only the ASR scope is used and aircraft may be directed to any selected runway over approximately the same flight path the pilot would take if flying VFR. This scope furnishes range and azimuth information only. Since no altitude information is available to the controller, pilots must control their descent based on the glide angle desired, and the distance from the runway as furnished by the controller. Because ASR does not permit the same degree of accuracy as PAR, the weather minimums for this type of approach are at least as high as, and in some instances higher than, the regular circling minimums listed in the Flight Information Manual for the airport.

CAA RADAR UNITS - Operate continuously at the locations listed. Available to all pilots, civil and military. Contact associated CAA control tower on any frequency guarded for initial instructions, or in an emergency any CAA facility for information on nearest Radar Control. Weather minimums, associated runways and GCA procedures are listed in the Flight Information Manual.

AIR FORCE AND NAVY GCA UNITS - Available to civil pilots in emergency or by prior arrangement with C.O. of respective facility.

Contact under IFR: Pilots desiring GCA assistance during IFR conditions should call the nearest air traffic control facility (radio, airways, or tower, etc.) requesting GCA and further instructions.

Contact under VFR: VFR check-out of training flights should be arranged locally through Base Operations or the Control Tower.

Emergency: When receiver or transmitter difficulties exist, the tower may relay GCA approach instructions to the pilot, or the GCA operator may transmit, in blind, instructions for aircraft to make three hundred sixty (360) degree turns for identification. In either case, instructions will be followed at the pilot's discretion.

After being inoperative, GCA units require 20 to 30 minutes for warming up. Pilots should anticipate requirements for GCA in flight planning and request alerting of GCA units as far in advance as possible.

Civil minimums at military installations estabilshed by the CAA are 400' ceiling and 1 mile visibility except in emergency unless Air Force or Navy facility being used has higher minimums.

Navy units are prepared to transmit on HF from 2000 to 18,100 kc and receive any frequency from 1500 to 9050 kc to aid any plane in emergency.

Alt MSL=Min. alt. over airport.

(D) = Day. (N) = Night. ➤ =New or revised data. ✓ = New facilities or name changes.

NAVY SPECIAL NOTICES

NAVY DATA: In accordance with Hydrographic Office Memorandum for Aviators, No. 17, September 17, 1948, before any changes or modifications of any aid to air navigation, such as realignment of radio ranges, modified instrument approach procedures, relocation of fan markers, etc., can be published by the Hydrographic Office, the Command requesting the change must first obtain approval from the Office of Chief of Naval Operations, Navy Department, Washington 25, D. C. When an approved change or modification has been made to any aid to air navigation, the Command shall immediately notify the U. S. Navy Hydrographic Office, Division of Air Navigation, Washington 25, D. C.

All Naval Air Stations and Air Facilities are directed to notify the U. S. Navy Hydrographic Office, Division of Air Navigation, Washington 25, D. C., direct, of all contemplated or immediate changes in their field facilities, operation rules, air-ground communication facilities, GCA, etc., and other factors affecting safe operation of aircraft which do not necessitate approval from CNO. This may be done by letter, speedletter, or dispatch, as applicable.

In accordance with Chief of Naval Operations Aviation Circular Letter 19-49 March 2, 1949, approval for the closing of any Navy or Marine Corps Air Station or Air Facility to transient military aircraft for a period in excess of ten days must be obtained from the Chief of Naval Operations.

Commanding Officers of Naval and Marine Corps aviation activities are directed to review all information published by the Hydrographic Office, U. S. Air Force, Civil Aeronautics Administration, and Coast and Geodetic Survey on facilities under their command and immediately forward any corrections or approved amendments direct to the publishing agency. A copy of the corrections or amendments to information published by other agencies should be forwarded to the Hydrographic Office. The charts and publications issued by the above-mentioned agencies must be currently maintained in order that all aviators can be kept informed of changes to airfields, seaplane anchorages, navigational aids, and other factors affecting the safe operation of aircraft.

AIR FORCE SPECIAL NOTICES

AIR FORCE DATA: Advice covering Air Force fields or Air Force operations on civil fields, or Air Force radio facilities, and also Air National Guard fields and facilities should be forwarded to: Commanding Officer, USAF Aeronautical Chart and Information Service, Washington 25, D. C.; Attn: Aeronautical Information Division.

Requests for approval of the closing of Air Force airfields or restrictions in airfield facilities to transient military aircraft for over ten days should be forwarded through channels to Headquarters, U. S. Air Force. Restrictions in Air National Guard fields or facilities will be forwarded to the National Guard Bureau through the State Adjutant General for approval. Information to be published will be coordinated and submitted to the Civil Aeronautics Administration by Headquarters, USAF ACIS.

In connection with the above, the attention of all base operations officers is invited to A.F. Regulation 55-12 of July 1, 1949, subject, "Notices to Airmen", A. F. Regulation 5-16 of February 20, 1948, subject, "Responsibilities for Flight Publications", and to A. F. Regulation 60-23 of September 23, 1947, subject, "Restrictions on Landing at Army Airfields".

AIR FORCE OFFICIAL BUSINESS: Air Force official business within the meaning of Air Force Regulation 85-2 is interpreted as the necessity for personnel aboard an aircraft to contact personnel, units, or organizations at or near the airfield selected for landing for the purpose of conducting transactions in the service of, and in the nearest of, the United States Government. This does not include the use of an airfield by transient aircraft for the purpose of obtaining clearance, service, or other items attendant to itinerant operations. Cross country flights for the purpose of maintaining flying proficiency are not considered to be official business within the meaning of this regulation.

SPECIAL CHARTS OF ATOMIC ENERGY AIRSPACE RESERVATIONS: The Atomic Energy Commission has issued a special chart depicting airspace reservations in the United States. Copies of this chart are being supplied each Air Force Base, AF Reserve Unit, National Guard Unit and other activities on the same mailing list basis as used for Airman's Guide. Operations officers should prominently display this chart and assure that pilots contemplating flight adjacent to these areas are briefed upon their existence, location and restricted status.

UTILIZATION OF CAA VAR STATIONS BY MILITARY AIRCRAFT: The attention of pilots is directed to the fact that voice facilities are available at many VAR stations (see pages 90 thru 103, A. N. 08-15-1), and CAA communications stations are located thereat. Such VAR facilities should be utilized for navigational aid and communications services, particularly when standard low frequency facilities are not available.

AIR FORCE FOREIGN CLEARING STATIONS: Under the authority of Air Force Regulation 60-8 of July 6, 1949, U. S. Air Force aircraft with destinations listed below or returning therefrom to the United States will clear through the stations indicated:

AFRICA and AZORES: Brookley AFB, Ala.; MacDill AFB, Fla.; Washington National Airport, D. C.; Westover AFB, Mass.

ALASKA: Great Falls AFB, Mont.; McChord AFB, Wash.; Travis AFB, Calif.

BERMUDA: Brookley AFB, Ala.; MacDill AFB, Fla.; Mitchel AFB, N. Y.; Washington National Airport, D. C.; Travis AFB, Calif.; Westover AFB, Mass.

CANADA: Brookley AFB, Ala.; Great Falls AFB, Mont.; McChord AFB, Wash.; Mitchel AFB, N. Y.; Selfridge AFB, Mich.; Washington National Arpt, D. C.; Westover AFB, Mass.

CANAL ZONE, CENTRAL AMERICA, MEXICO and SOUTH AMERICA: Brookley AFB, Ala.; Kelly AFB, Texas; MacDill AFB, Fla.; March AFB, Calif.; Washington National Airport, D. C.

CARIBBEAN: Brookley AFB, Ala.; Kelly AFB, Texas; MacDill AFB, Fla.; Washington National Airport, D. C.

ENGLAND, GREENLAND, ICELAND, and NORTH IRELAND: Washington National Airport, D. C.; Westover AFB, Mass.

EUROPEAN THEATER: Brookley AFB, Ala.; Kelly AFB, Texas; MacDill AFB, Fla., Washington National Airport, D. C.; Westover AFB, Mass.

HAWAII: Travis AFB, California.

NOVA SCOTIA and NEWFOUNDLAND: Brookley AFB, Ala.; Mitchel AFB, N. Y.; Selfridge AFB, Mich.; Washington National Airport, D. C.; Westover AFB, Mass.

The classified "Foreign Clearance Information Guide", published by Aeronautical Chart and Information Service and now distributed to all Air Force bases should be consulted prior to departure for foreign clearing station, particularly with regard to diplomatic requirements for country for which clearance is desired, in order that appropriate advance notice of flight may be given and delay at foreign station may be avoided.

CURRENT FEDERAL AIRWAYS MANUALS OF OPERATION: The following publications are now distributed in accordance with AF Regulation 5-12, and supersede listing given in paragraph 5 of this regulation. Base operations officers, weather and communication units should check copies in use to insure that latest issues and all revisions are available. Mailing lists are now maintained in accordance with groupings of material as follows:

GROUP I MATERIAL: II-B. Instructions for the Operation of Communications Facilities, First Edition, January 15, 1950 (This replaces II-B-2, II-B-3, II-B-5, II-B-7, II-B-8 and II-B-11); M-59, November 5, 1949 (Service "B").

GROUP II MATERIAL: Location Identifiers, Fourth Edition, July 1, 1950, with two revisions.

GROUP III MATERIAL: Contractions, Fifth Edition, December 1, 1949.

GROUP IV MATERIAL: Civil Airways Mileage Chart of December 27, 1950.

GROUP V MATERIAL: Teletype Service "A" Manual, September 19, 1950; Teletype Service "C" Manual, January 9, 1951; Teletype Maps: M-11, December 1, 1949, and M-14 April 15, 1950 (Service "A"); M-10, October 1, 1949, and M-13, November 1, 1950 (Service "C"); M-58, August 15, 1950 (Service "A", "C", and "O").

GROUP VI MATERIAL: Teletype Service "O" Manual, May 1, 1950, with Revision 6 (Revisions 1-5 obsolete). Teletype Maps M-89, February 1, 1950 (Service "O") and M-58 (Service "A", "C" and "O").

Requests for distribution should be directed to Commanding Officer, Aeronautical Chart and Information Service, Washington 25, D. C. Attn: Aeronautical Information Division.

USAF POLICY REGARDING USE OF INACTIVE FIELDS: In accordance with directive from Headquarters, USAF, Air Force fields which are on inactive status and are listed in the Directory as "INACT-NO FACS" will in the future be closed to all USAF pilots not possessing their own clearance authority in accordance with AFR 60-16, unless on official business with written orders.

COMPULSORY REPORTING POINTS - VAR RANGE FACILITIES: VAR Facilities designated by CAA and shown on radio facility charts as Compulsory Reporting Points will be applicable to USAF aircraft only if the aircraft is equipped with the necessary instruments and radio frequencies and if a flight plan has been filed with ATC declaring the intention to utilize these facilities. When ATC clearances include instructions using these facilities and the aircraft is not equipped for such use, the pilot should so advise the traffic control agency and request amended traffic control instructions.

UHF CHANNELIZATION: An initial UHF channelization plan has been approved for USAF and USN UHF-equipped aircraft in the U. S. and will be published in subsequent issues of the Radio Facility Charts. UHF frequencies which are being first implemented at USAF stations on a continuing program beginning 1 July 1951 are:

Channel 1	Control tower (military primary)	236.6 mc
" 15	Military Airways	258.20 mc
" 17	GCA	335.80 mc
" 18	GCA	289.40 mc
Guard	Military emergency	243.00 mc

CAA stations, towers and centers are providing service on UHF. Channels used and locations at which services are available will be found in the Air Navigation Radio Aids Section of the Airman's Guide.

CIVIL SPECIAL NOTICES

CIVIL DATA: The Airman's Guide covers primarily two broad fields of civil airport information, namely so-called permanent data changes and temporary hazardous conditions. Permanent airport data refer to new airports or changes in field layout or servicing, lighting or permanent obstructions on existing airports. Temporary hazardous conditions refer to conditions that make such airports temporarily unusable or usable only with caution. Such hazardous conditions could be, for example, a field closed because of floods, spring thaws, or construction, or merely a burned-out obstruction light or runway partially unusable because of construction.

Obviously, temporary hazardous conditions should be reported to the aeronautical public at once. The necessity for reporting additional aids or minor changes in existing aids however, isn't nearly as cogent. In other words, a temporarily closed airport is ordinarily of much more importance from a safety viewpoint than is a new airport, and the aeronautical public should be told about it as expeditiously as possible.

(12-4-51)

Notamizing of advice covering a field unusable because of flood or snow, a runway closed because of construction, or the erection of a pole-line in an approach, doesn't necessitate an engineering background on the part of the reporter. Too, safety frequently necessitates the notamizing of such advice before an official check can be made. On the other hand, advice covering permanent airport data changes, such as a new airport, or a lengthened landing strip, or an additional hangar, obviously doesn't require the same expeditious transmission to the aeronautical public, and the data may be checked from an engineering standpoint and for standardization before being publicized.

SUMMATION: (a) Since the aeronautical public should be immediately advised on hazardous conditions, reporters should utilize the CAA Airway Communications Stations. The item to be reported, therefore, should either be telephoned or mailed to the nearest communications station for dissemination as a notam and for further transmission to the publishers of the Airman's Guide. (If this is not feasible the items should be reported directly to the Office of Aviation Development, Attention: W-155, Washington 25, D.C.)

(b) Permanent airport data changes (as differentiated from temporary hazardous conditions) should be reported to the appropriate C.A.A. District Airport Engineer for coordination before they are included in the Airman's Guide.

CIVIL USAGE OF MILITARY FIELDS: U.S. Air Force and Navy fields are open to civil fliers only in emergency or with prior permission of the commanding officers thre

DIRECTORY OF AIRPORTS AND AIR NAVIGATION RADIO AIDS NOTAMS: Because of space limitation, the Airport Directory and Air Navigation Radio Aids perforce serve as a notam supplement. Notam data revising a previous Directory or ANRA are indicated by prefixed arrows. The only airport or radio data (other than temporary conditions of short duration) carried in the Notices to Airmen Section are facility coordinates, post-deadline data or data impossible to incorporate in the two above tabulations.

DIRECT COMMUNICATIONS WITH AIR ROUTE TRAFFIC CONTROL CENTERS: The CAA has inaugurated a procedure whereby pilots operating on IFR flight plans may have direct communication with air route traffic controllers at certain control centers. VHF on a simplex basis (call-up and reply on the same frequency) is used. This enables the controller to issue traffic clearances and receive indications of compliance therewith in such a manner that all air traffic is expedited. The center will guard the assigned frequency. However, each specific aircraft, with which the center desires to establish direct communication for control purposes, will receive a clearance through the appropriate CAA, AACS or Air Carrier Communications Station, indicating the time or place the controller desires to communicate directly with the pilot.

The locations at which this direct communications procedure is available are listed in the Air Navigation Radio Aids Section of the Airman's Guide. Each one is listed alphabetically following the tower listing.

VERY HIGH FREQUENCIES FOR PRIVATE PILOTS: Use of very high frequency channels by the majority of private pilots has heretofore been limited to the channels 121.5, 122.1, 122.5 and 122.8 mc. Now, however, any private pilot having need for additional channels may apply to the FCC for use of any of the 40 channels in the 118.1 to 126.7 mc band. To determine their additional requirements, pilots should consult the Airman's Guide (Radio Facilities Section) or contact the nearest CAA regional office for information concerning the channels which have been implemented at the various locations. Of particular interest may be the channel 126.7 mc which was previously limited to use by air carriers for communication with CAA stations (INSACS) but now may be used by any private pilot if required for that purpose.

DVFR FLIGHT PLANS: When an IFR flight plan is canceled, a DVFR flight plan should be filed if the provisions of Part 620 of the Regulations of the Administrator will be applicable to any portion of the remainder of the flight.

✓AERONAUTICAL ADVISORY STATIONS (FREQUENCY 122.8 mc): This frequency is known in some areas as the "private flyers frequency" and also as "UNICOM". Licenses for ground stations and aircraft are now being issued by the FCC subsequent to receipt of application for license from private pilots and airport operators eligible to use the frequency. Under the FCC rules, private aircraft may use 122.8 mc for communication with aeronautical advisory stations and between private aircraft themselves while in flight. Particular attention is invited to Section 9.1001 which follows:

"9.1001 Eligibility for station license. Authorizations for aeronautical advisory stations will be issued only to the owner or operator of a landing area, not served by an airdrome control station. Only one Aeronautical Advisory station will be authorized at a landing area".

The scope of service to be rendered under FCC rules for the ground station is:

"9.1004 Scope of Service. (a) Communications shall be limited to the necessities of safe and expeditious operation of aircraft. The service shall be advisory in nature, pertaining to the condition of runways, types of fuel available, wind conditions, available weather information or other information necessary for aircraft operations. (b) Aeronautical Advisory stations shall not be used for the control of aircraft."

The following locations have been reported as having Aeronautical Advisory Service available:

Airport operators interested in providing this service may obtain further details from the nearest FCC or CAA field office.

AIR TRAFFIC CLEARANCES: The initial traffic clearance issued to an aircraft prior to departure will normally authorize flight to the point of first intended landing, with instructions to maintain the altitude at which the aircraft enters the next control area. The pilot should request any desired altitude changes en route. Better service can be given the pilot if any altitude change is requested at the time the change is desired. An amendment to the initial clearance may be issued to a flight at any time the air traffic controller deems such action necessary to avoid possible confliction between en route, landing, or departing aircraft. A flight is always cleared to a specific point or location (radio or visual reporting point), defined as a clearance limit. If the assigned altitude is below the minimum for a subsequent portion of the flight and radio failure is experienced, the procedures outlined under TWO-WAY RADIO FAILURE must be followed to insure proper terrain clearance.

Whenever an aircraft has been cleared to a point other than the destination airport it is the responsibility of Air Traffic Control to issue whatever further clearance is appropriate at least five minutes before the aircraft arrives at the clearance limit, unless holding instructions and a time at which the pilot may expect further clearance have been received and acknowledged by the pilot. In the event a pilot arrives at a clearance limit without having received either a clearance beyond or holding instructions at such fix, he should immediately request further clearance and hold at the clearance limit, maintaining the last assigned altitude, until further clearance is received. When a clearance limit is a point other than

destination airport, the altitude of the aircraft at this clearance limit will be protected so that separation will exist in the event the aircraft must hold awaiting further clearance. NOTE: The foregoing should not be construed as being related in any way to the procedures which apply when a two-way radio failure occurs.

USE OF OMNIRANGE: Airmen are requested to assist the CAA and the Radio Technical Commission for Aeronautics in confirming the practicability of operating VOR facilities 100 kc apart with a geographical spacing of only 130 statute miles. The Lynchburg, Va. VOR operates on 116.1 mc and the Washington National Airport TVOR operates on 116.2 mc. If interference is noted between these facilities it is requested that you notify the CAA, Washington 25, D. C., including information as to the altitude and distance at which interference is first noted, the make of omnireceiver in use, which station is causing the interference, and the manner in which the interference manifests itself.

INSAC VHF REPLY TO PRIVATE AIRCRAFT: The new national ground-to-air call-up and reply channel for communication with private aircraft, 122.2 mc was implemented at certain INSACs on August 1, 1951. Eventually, all INSACs will transmit on 122.2 mc but in the meantime VHF reply to private aircraft will be furnished on the VHF range voice channel at INSACs which have not yet commissioned 122.2 mc. Pilots should consult the Airman's Guide and current NOTAMS for information on frequencies available at specific station. The frequency upon which the pilot expects reply should be specified in the initial call. When an INSAC is unable to reply on the VHF range voice channel because of equipment failure or maintenance shutdown, reply will be made on 121.5 mc. A small number of INSACs have not yet installed transmitting service on 121.5 mc. At these locations, the reply on 121.5 mc will be made by an adjacent control tower. Therefore, when a pilot calling such station has reason to believe that the VHF range voice channel is not operating, he should request reply on 121.5 mc.

TRANSMISSION OF "V" BY VAR RANGES: Effective on or about November 15, 1951, the letter "V" will be transmitted by all VAR ranges. It will precede the usual location identifier and be separated from it by a short space. It is intented to enable pilots to distinguish instantly between the aural directional signals of VHF ranges, and those of low or medium frequency ranges located in the same general area. It will, for example, guard against the possibility of an error occuring through accidental connection of a pilot's headset to the wrong receiver. The "V" will be transmitted at an appreciably higher rate of speed than the location identifier.

√TEST OPERATION OF NEW ILS LOCALIZER IDENTIFICATION FEATURE: The International Morse letter "I" (two dots) is being added to the three-letter identification characteristic of the ILS localizer at one location in each CAA Region in the Continental United States to distinguish the localizer from the adjacent VOR facility using the same three-letter identification. The letter "I" will follow the three letter identification after an interval of approximately one half second. Test operation will continue for thirty days. A Notice to Airmen will be issued by each station when it inaugurates this test. Pilot reports to the Office of the Regional Administrator regarding desirability of this feature, are requested.

√RADAR WEATHER REPORTS BROADCAST BY CAA STATIONS: Beginning on or about Dec. 10, 1951, CAA stations will broadcast radar observations from the following locations:

Boston, Mass.
New York, N. Y.
Washington, D. C.
Miami, Florida
Tampa, Florida
Urbana, Ill. (broadcast by Springfield, Ill.)
Brownsville, Texas
Burrwood, La. (broadcast by New Orleans)
Corpus Christi, Texas
Wichita Falls, Texas
Wichita, Kansas

The Weather Bureau stations at these locations take observations twice each hour when the radar scope indicates the presence of weather conditions of significance to pilots. Radar reports based on these observations will cover affected areas within 75 to 125 mile radius of the reporting point. The reports are broadcast in plain language form by the CAA communications station at the point of origin in the regular scheduled broadcasts at 15 and 45 minutes past each hour. Radar reports of special significance will be broadcast by the station immediately upon receipt. In addition to the above, radar reports from Victoria, Texas and Norfolk, Nebraska will be available from nearby CAA communications stations on pilots' request.

√NON-STANDARD HOLDING PATTERN: Effective immediately the following non-standard holding pattern is established: DIXON RBN, direction from holding point - N, direction of turn - LEFT on E side N crs of Travis rng, time - 2 minutes.

√DANGER AREA DESIGNATIONS: The following Danger Area amendment shall be effective as dated, unless otherwise advised:

AMENDMENT NO. 6 to PART 608 - DANGER AREAS
(Dec. 3, 1951)

In Section 608.27, A Deblois, Maine area is added to read: Location: DEBLOIS (Lewiston Chart); Description: N boundary: lat. 44-50-00; S boundary: lat. 44-40-00; E boundary: long. 67-42-00; W boundary: long. 67-56-00; Altitudes: Surface to 50,000 ft.; Time: Daylgt hrs only; Using Agency: Hdqs., 132nd Fighter Bomber Wing, Dow Air Force Base, Bangor, Me.

AMENDMENT NO. 7 to PART 608 - DANGER AREAS
(Dec. 10, 1951)

(1) In Section 608.28, the Patuxent, Md. area (d), published on Jan. 18, 1950 in 15 F. R. 294, is deleted.

(2) In Section 608.54 a Tangier Island, Va. area is added to read: Location: TANGIER ISLAND (Norfolk Chart); Description: A circle with a radius of 5 nautical miles centered at lat. 37-47-54, long. 76-03-48, excluding any portion which overlaps Amber Civil Airway No. 9; Altitudes: Surface to unlimited; Time: Continuous; Using Agency: Patuxent River NAS, Md.

(3) In Section 608.63, the Desecheo (mis-spelled "Desechoe") Island, Puerto Rico area published on October 31, 1951 in 16 F. R. 11068 is amended by changing the "Designated Altitudes" column to read: "Surface to 50,000 feet."

(4) In Section 608.63, the Monita Island, Puerto Rico, area published on October 31, 1951, in 16 F. R. 11068 is amended by changing the "Designated Altitudes" column to read: "Surface to 50,000 feet".

√CIVIL AIRWAY, CONTROL AREA, CONTROL AREA EXTENSION, CONTROL ZONE AND REPORTING POINT AMENDMENTS: Effective 0001 EST, December 25, 1951, unless otherwise advised, civil airways, control areas, control area extensions, control zones and reporting points are amended in whole or in part as follows:

CIVIL AIRWAYS: (1) Green civil airway No. 9 (Hawaiian Islands), is amended by adding the following to present civil airway: "excluding the portion below 5,500 feet which overlaps the Kaneohe; Naval Airspace Reservation."

(2) Red Civil Airway No. 1 (Portland, Oreg. to Kansas City, Mo.) is amended by correcting the name of facility at Topeka, Kans. from "Topeka, Kansas VHF rdo rng stn" to "Topeka, Kansas omnirng stn."

(3) Blue Civil Airway No. 11 (Toledo, Ohio to Niagara Falls, N. Y.) is amended by correcting last portion to read: "From the Cleveland, Ohio rdo rng stn via the Erie, Pa. rdo rng stn; the intsxn of the NE crs of the Erie, Pa. rdo rng and the SW crs of the Buffalo, N. Y. rdo rng to the intsxn of the SW crs of the Buffalo, N. Y. rdo rng and the E crs of the Clear Creek, Ont., Cand. rdo rng. From the Buffalo, N. Y. rdo rng stn to the Niagara Falls Arpt, Niagara Falls, N. Y. excluding the portion which lies outside the United States."

CONTROL AREAS: (1) Green Civil Airway No. 2 (Seattle, Wash. to Boston, Mass.) is amended by correcting last portion to read: "from the Lansing, Mich. omnirng stn via the Lansing omnirng 99° true en route radial to its point of intsxn with the Detroit, Mich. omnirng 343° true en route radial."

(2) Blue civil airway No. 13 (Houston, Texas to Minneapolis, Minn.) is amended by changing first portion to read: "All of Blue civil airway No. 13 including all that area within 5 miles

either side of the en route and altitude change radials and the area between the altitude change and en route radials from the Houston, Texas omnirng stn to the Lufkin, Texas omnirng stn via the direct en route radials; from the Lufkin, Texas omnirng stn to the Shreveport, La. omnirng stn via the direct en route radials. From the Fort Smith, Ark. omnirng stn to the Neosho, Mo. omnirng stn via the direct en route and 15° W alt change radials;".....

CONTROL AREA EXTENSIONS: Goodland, Kansas control area extension is amended to read: From the Goodland, Kansas omnirng stn extending 5 miles either side of the 22° true radial of the omnirng to a point 20 miles north."

CONTROL ZONES: (1) The five mile control zone section is amended by deleting the following airport: "Naknek, Alaska, Naknek Arpt" and by adding in lieu thereof: "King Salmon, Alaska, King Salmon Arpt."

(2) Goodland, Kansas control zone is amended to read: Within a five mile radius of the Goodland, Kansas Mun. Arpt and within 2 miles either side of the 22° true radial of the Goodland omnirng extending from the omnirng stn to a point 10 miles north.

(3) Upolu Point, Hawaii, T. H. control zone is added to read: Within a 5 mile radius of the Upolu Point Arpt and within 2 miles either side of the 261° true radial of the Upolu Point omnirng extending from the omnirng stn to a point 10 miles west.

REPORTING POINTS: (1) Red civil airway No. 1 (Portland, Oreg. to Kansas City, Mo.) is amended by changing name of facility of compulsory reporting points from "VHF rdo rng stn" to "omnirng stn" at the following locations: Goodland, Kansas; Hill City, Kansas; Salina, Kansas and Topeka, Kansas and by deleting the following compulsory reporting point: "Waldo, Kansas VHF rdo rng stn".

(2) Red civil airway No. 11 (Enid, Okla. to Boston, Mass.) is amended by deleting the following compulsory reporting point: "the intsxn of the E crs of the Louisville, Ky. rdo rng and the NW crs of the Lexington, Ky. rdo rng;"

✓CORRECTION TO AERONAUTICAL CHART: Correct Elko Sectional Chart, dtd September 28, 1951 by changing the coordinates of North Fork, Nevada, Crosby-Stevens Arpt to lat. 41-30-30, long. 115-50-30.

IMPENDING CHANGES IN AERONAUTICAL DISTANCE AND SPEED UNITS

All CAA air-ground communications within the continental United States and Alaska will change over to the use of nautical miles for horizontal distance and visibility and knots for horizontal speed on July 1, 1952. These changes are necessary in order to conform to international practices.

Basically, a nautical mile is the length of a minute of latitude at sea level, or the length of a minute of longitude at sea level at the equator. This distance is 6,080.20 feet, as compared to 5,280 feet for the common or statute mile. Since the ratio 6,080/5,280 is equal to 1.15, and the ratio 5,280/6,080 is equal to .87, it is apparent that the number of statute miles is 115% of the number of nautical miles, or the number of nautical miles is 87% of the number of statute miles. Furthermore, if the fraction 6,080/5,280 is reduced to lowest terms, we obtain 38/33, indicating that 38 statute miles are equal to 33 nautical miles.

Furthermore, practically all air navigational computers provide quick and easy conversions of nautical miles to statute miles, or vice versa, so no difficulties should be experienced by anyone who will attempt to inform himself as to the relationship of the units and with at least one of the various methods of conversion. Attention is specifically called to the fact that the knot is a unit of speed and not a unit of distance, being equal to nautical miles per hour.

Conversion Tables for Statute and Nautical Miles
(To the nearest hundredth)

1 nautical mile = 6,080.20 ft. 1 statute mile = 5,280.00 ft.

SPECIAL NOTICE

Due to lack of space we have been unable to publish new or amended Instrument Approach Procedures as rapidly as they have been placed in effect.

In order to clear up the backlog that has accumulated, we have deleted the Directory of Airports from this issue of the Airman's Guide and are using these pages to present those Procedures necessary to bring them all up to date.

The next issue of the Guide, of course, will again contain the Directory of Airports.

The next issue of the Guide, of course, will again contain the Directory of Airports.

SPECIAL NOTICE

INITIAL RADIO CONTACTS: Pilots of civil itinerant aircraft are requested to identify their aircraft fully on the initial contact with CAA facilities as follows: (make) . . . . (all digits of certification number) . . . . (letter suffix, if any), e.g.,

"STINSON ONE THREE SIX FIVE-Y"
"WACO SIX EIGHT FOUR SEVEN FOUR"

After communications have been established, an abbreviated form of identification may be used, if desired, as follows:

"STINSON THREE SIX-Y" (last three units registration number only)

VOL. 6, NO. 20 . . DECEMBER 18, 1951

The AIRMAN'S GUIDE is issued every two weeks. This issue includes all data on record as of 0001 E.S.T. on the above date. For later information consult teletype NOTAMS.

ALWAYS CHECK NOTICES TO AIRMEN SECTION

AIR NAVIGATION RADIO AIDS

INSAC = Interstate Airway Communications Station (CAA).

VHF OMNI-RANGES: "Non-commissioned" VHF omni-ranges may lack certain items, such as monitoring or control equipment or may not have been flight-checked and are subject to shut-down at any time without notice. The courses may or may not be within the prescribed tolerances and the station is to be used accordingly.

VAR AND VOR MONITORING CLASSIFICATION FOR AIR TRAFFIC CONTROL PURPOSES: Category I (VAR) = Following conditions must be met: (A) The visual course alignment and signal level are monitored continuously. (B) The aural "A" or "N" sector signal is monitored continuously by the communicator at the associated INSAC. (C) The station identification is monitored continuously by the communicator at the associated INSAC. (D) The aural course alignment is monitored at least once each hour by the communicator at the associated INSAC. Category I (VOR) = Course alignment and signal level are monitored continuously. NOTE: Category I indicated by parenthetical (1). Category II (VAR only) = If all except (D) of the conditions of Category are met. NOTE: Category II indicated by parenthetical (2). Category III = Facility monitored solely through use of automatic visual course and signal level monitor with automatic transfer unit. This category may permit VOR to be inoperative for a limited period before a notice to airmen is issued. Normally, VHF ranges which are not controlled by an INSAC, and located too distant from INSAC to be monitored with a VHF receiver will fall into Category III. NOTE: Category III indicated by parenthetical (3).

LEGEND

(A) = Air Force facility. (N) = Navy facility. (P) = Private facility
(g) = Tower equipped with 121.9 or 121.7 mc transmitter for control of ground traffic. (7-19) = Hours of operation, i.e., 0700-1900
(U) = Unmonitored, but usable for navigation (3) = Monitoring category
(B) = Blue Hemisphere; (Y) = Yellow hemisphere
→ New or revised data
✓ New facilities or name changes, see page 20

NOTE: Letters between range courses are quadrant identifiers, e.g., "90 YN 180" indicates the quadrant between the two courses is a yellow N quadrant. The letter immediately following a range course indicates whether the course is aural or visual; i.e., "Y" or "B", for yellow or blue, indicates visual: "A" or "N" aural. In the case of low frequency ranges, the A or N cited between two courses is the identification to be heard in the quadrant between those two courses.

RADIO CLASS DESIGNATIONS

AC. . . Approach Control Tower, CAA (transmits on voice channel of associated L/MF range or ILS in addition to frequencies listed)
B. . . . Scheduled Broadcast Station (broadcasts weather at 15 & 45 minutes after the hour; Air Force Broadcasts, generally, 29 minutes)
C. . . . Control Tower, CAA
CA. . . Control Tower, Air Force
CI. . . Control Tower (City, County, Private, etc.)
CN. . . Control Tower, Navy
D. . . . Distantly controlled
FM. . . VHF fan marker (100 watts)
GCA. . Ground Controlled approach system
H. . . . Non-directional radio beacon (homing), power 50 watts to less than 2000 watts
HH. . . Non-directional radio beacon (homing), power 2000 watts or more
ILS. . . Instrument Landing System (voice on localizer channel)
J. . . . L/MF (200-415 kc) voice facility on other than range frequency
LFM. . VHF fan marker, low powered (5 watts)
LMM. . Compass locator station when combined with middle marker of ILS
LOM. . Compass locator when installed at outer marker site or within 5.5 miles of middle marker
MH. . Non-directional radio beacon (homing) power less than 50 watts
ML. . Range (loop radiators), power less than 50 watts
MM. . . VHF middle marker
MOR. . . Low frequency omni-directional range
MRA. . Range (adcock, vertical radiators), power 50 or more, but less than 150 watts
MRL . . Range (loop radiators), power 50 or more, but less than 150 watts
OM. . . VHF outer marker
P. . . . Point-to-Point radio
RA. . . Range (adcock, vertical radiators), power 150 watts or more
RL. . . Range (loop radiators), power 150 watts or more
S. . . . Simultaneous (range signals and voice) type of transmitter
T. . . . Teletype
TX. . . Principal teletype
V. . . . Additional VHF voice feature on other than range frequency
VAR. . Visual-aural VHF range
VOR. . Omni VHF omni-directional range (omni-range)
W . . . Without voice facilities on range frequency
Z . . . . VHF station location marker at a range station.

FREQUENCY LEGEND

V = 135.9 and 135.0 mc transmitted.
# = Guards same VHF frequencies station transmits except 122.2 mc and 135.0 mc.
(1) = 3105, 4495 kc guarded
(2) = 3105, 4495 kc; 122.5 mc. This group of frequencies is group generally guarded by C.A.A. towers.
(3) = 3105, 4495 kc; 122.1, 126.7, 135.9 mc. This group of frequencies is group generally guarded by INSACS.
e.g., (3)-135.9, 122.1 guards every frequency in group (3) except 135.9 and 122.1
/ = Transmitting frequencies/ guarding frequencies.

NOTES

1. Range courses are magnetic in-bearings.
2. All C.A.A. MH facilities operate continuously unless cited as follows: (on req)
3. All C.A.A. ranges operate continuously. Those which are not manned continuously are cited in the class column with hours of operation in parentheses, e.g., (6-24)
4. When a VOR or VAR is controlled by an associated LF range, because of space limitation, DTV is not included in the VHF range class.

Pilots are requested to indicate when calling C.A.A. airway communications stations and control towers the frequency on which the reply is expected.

RADAR AVAILABLE — How and Where

PAR = PRECISION APPROACH RADAR. ASR = AIRPORT SURVEILLANCE RADAR.
GCA = GROUND CONTROLLED APPROACH - MILITARY EQUIVALENT OF COMBINED ASR AND PAR EQUIPMENT

GROUND CONTROLLED APPROACHES - The only airborne equipment required for ground controlled approaches is a functioning radio transmitter and receiver. There are two types of ground controlled approaches - Precision and Surveillance (PPI).

PRECISION APPROACHES - Aircraft are guided to final approach to the designated instrument runway. The final approach flight path on a precision scope (PAR) is greatly expanded for increased accuracy and furnishes the controller with range, azimuth and altitude information. This permits the controller to accurately guide aircraft to touchdown on the runway.

SURVEILLANCE or PPI APPROACHES - Only the ASR scope is used and aircraft may be directed to any selected runway over approximately the same flight path the pilot would take if flying VFR. This scope furnishes range and azimuth information only. Since no altitude information is available to the controller, pilots must control their descent based on the glide angle desired, and the distance from the runway as furnished by the controller. Because ASR does not permit the same degree of accuracy as PAR, the weather minimums for this type of approach are at least as high as, and in some instances higher than, the regular circling minimums listed in the Flight Information Manual for the airport.

CAA RADAR UNITS - Operate continuously at the locations listed. Available to all pilots, civil and military. Contact associated CAA control tower on any frequency guarded for initial instructions, or in an emergency any CAA facility for information on nearest Radar Control. Weather minimums, associated runways and GCA procedures are listed in the Flight Information Manual.

AIR FORCE AND NAVY GCA UNITS - Available to civil pilots in emergency or by prior arrangement with C.O. of respective facility.

Contact under IFR: Pilots desiring GCA assistance during IFR conditions should call the nearest air traffic control facility (radio, airways, or tower, etc.) requesting GCA and further instructions.

Contact under VFR: VFR check-out of training flights should be arranged locally through Base Operations or the Control Tower.

Emergency: When receiver or transmitter difficulties exist, the tower may relay GCA approach instructions to the pilot, or the GCA operator may transmit, in blind, instructions for aircraft to make three hundred sixty (360) degree turns for identification. In either case, instructions will be followed at the pilot's discretion.

After being inoperative, GCA units require 20 to 30 minutes for warming up. Pilots should anticipate requirements for GCA in flight planning and request alerting of GCA units as far in advance as possible.

Civil minimums at military installations estabilshed by the CAA are 400' ceiling and 1 mile visibility except in emergency unless Air Force or Navy facility being used has higher minimums.

Navy units are prepared to transmit on HF from 2000 to 18,100 kc and receive any frequency from 1500 to 9050 kc to aid any plane in emergency.

Alt MSL=Min. alt. over airport.

(D) = Day. (N) = Night. ➤=New or revised data. ✓= New facilities or name changes.

ALWAYS CHECK NOTICES TO AIRMEN SECTION

CITY AND AIRPORT NAME

(AF) Airport name followed by city name in parenthesis (With AF in Type Column) - field owned or leased in whole by U. S. Air Force.

(AF) City and Airport Name (with C,I,M,MG or P in Type Column) - a civil airport with Air Force operations, reserve training, or other such acitvity thereon.

NOTE: Similar combinations of above two citations of A,N,CG, and NG indicate the same is applicable for Army, Navy, Coast Guard, and National Guard fields respectively.

(P) City and Airport Name - Civil Airport covered by an agreement between municipality and U. S. Government which permits use by transient military aircraft.

(PC) Same legal status as (P), but closed to all USAF pilots not possessing their own clearance authority in accordance with AFR 60-16.

* City, Site No., and Airway abbreviation - CAA intermediate field. Municipal airports with lights maintained by the CAA are listed similarly except there is no prefixed star.

NOTES:

1. MILITARY FIELDS ARE OPEN TO CIVIL AIRCRAFT ONLY BY PRIOR PERMISSION OF THE C.O. THEREOF. ALL AIRPORTS with C,I,M, or MG in type column are open to civil fliers.

2. USAF aircraft are permitted to use only those fields prefixed with an AF,A,N,NG,CG,P,PC or *.

3. When city and airport names are identical, the airport name is omitted to conserve space.

TYPE

AF	-Air Force	C	-Commercial	MG	-Misc. Govt
A	-Army (May also be used by Army Nat'l Guard)	CG	-Coast Guard	N	-Navy
		I	-Intermediate	NG	-Air Nat'l Guard
		M	-Municipal	P	-Private

LOCATION

The word "miles" has been eliminated because of space limitations. Mileage is that from the center of city to airport.

If orientation features are less than 1/2 mile from the field, distance is not specified

ELEVATION

Obviously, the effective length of a runway decreases with elevation above sea level. The C.A.A. formula for elevation correction is that a sea level runway length requirement must be increased 7% per 1000 feet of elevation above sea level. High temperatures also play an important role in reducing the effective length of runways.

NUMBER OF RUNWAYS

No differentiation is made between runways and strips as far as number of landing areas in field is concerned.

DIRECTORY OF AIRPORTS
LEGEND

LONGEST RUNWAY
FACILITIES

In this column are included the length and surfacing of the longest runway, the lighting and servicing facilities, and weather reports available.

RUNWAYS

The length of the longest paved runway or non-paved strip is stated in hundreds of feet. If the length is not prefixed, the surface is sod, clay, gravel, etc.

h - runway is paved (concrete, asphalt or similar type of paving)

aw - allway field

(26) - runway or strip length not verified by C.A.A.

LIGHTS

B: Rotating Light (Rotating beacon) (Green and white, split-beam and other types) Omission of B indicates rotating light is either not available or not operating standard hours (sunset-sunrise).

NOTE: Code lights are not codified, and are carried in Remarks Column.

L: Field Lighting

- L - by itself indicates temporary lighting, such as flares, smudge pots, lanterns.
- 1 - Portable lights (Electrical)
- 2 - Boundary
- 3 - Runway floods
- 4 - Runway or Strip
- 5 - Instrument approach (neon)
- 6 - High intensity runway
- 7 - High intensity instrument approach

* An asterisk preceding an element indicates that it operates on prior request only (by phone call, telegram or letter). Where the asterisk is not shown, the lights are in operation or available sunset to sunrise by request (circling the field or radio call).

Because the obstructions on virtually all lighted fields are obstruction lighted, obstruction lights have not been included in the codification.

SERVICING

S1: Storage
S2: Storage, minor aircraft repairs
S3: Storage, minor aircraft, and minor engine repairs
S4: Storage, major aircraft, and minor engine repairs
S5: Storage, major aircraft, and major engine repairs

NOTE: Any S combination without parenthesis indicates only full-time day attendant. Fields having lighting facilities may have 24 hours attendant available.

Any S combination in parenthesis-part time or irregular attendant.

WEATHER

W: Weather reports available from Weather Bureau or C.A.A. communications station on field.

FUEL OCTANE

Civil Fuel:

F1: 80 oct., at least
F2: 87 oct., and lower
F3: 91 oct., and lower
F4: 100 oct., and lower

NOTE: If only one octane available, this octane cited, and not coded.

Any F combination without parenthesis indicates full time day attendant, in parenthesis part-time or irregular attendant.

FUEL OCTANE (cont)

Air Force and Navy Fuel

A+: 115/145 oct.
A : 100/130 oct.
B : 91/96 oct.
C: 73/80 oct.
J: Jet Fuel

REMARKS

(a) "INACTIVE" indicates usable civil field, but not being operated, at last inspection. Caution advised.

(b) "CLOSED" indicates closed to all traffic except in emergency.

(c) "OFL BUS ONLY" indicates closed to all transient military aircraft except on official business or in emergency. U. S. Aircraft require written orders. "AF OFL BUS ONLY" or "NAVY OFL BUS ONLY" indicates applicability of restriction only to Service indicated.

(c) "INACT - NO FACS" indicates AF airfields used exclusively by the USAF or municipal fields used jointly by the USAF and civil interest at which both USAF and civil interest are inactive; these will be available to military aircraft at the discretion of the Commanding Officer of the organization to which aircraft are assigned.

(e) "CIVIL FACS ONLY" indicates municipal fields under joint control or ownership of the USAF and/or Navy and civil interests at which no USAF or Navy facilities are available. Such fields may be used by military aircraft; however, only commercial service is available.

(f) "LIMITED USE" indicates some special restriction on use of field which will be listed in Notices to Airmen section of Airman's Guide.

(g) "ABANDONED" indicates reverted to non-airport usage such as farming or grazing.

(h) "REPORTED ABANDONED" indicates an airport reported abandoned but not verified as such by C.A.A.

(i) "FEE" indicates landing charges for private or non-revenue producing aircraft. In addition, fees may be charged for planes that remain over a couple of hours and buy no services, or at major airline terminals for all aircraft.

(j) "Blkd" indicates approaches where glide angle to runway is 3:1 or less.

(k) "Rgt tfc N" indicates right turns should be made on landings and take-offs to N.

(l) "A,B" indicates Air Force or Navy fuel. See Fuel Octane column.

NOTES

1. → New or revised data.
2. SCHEDULED AIRLINE STOP airport names are capitalized.
3. PRIVATE AIRPORTS: Usually unattended, offer no public service and solicit no public patronage. Such fields are listed primarily because of their possible utility as emergency landing areas. Use of these fields is at the risk of the user. No "S" or "F" combination is ever assigned these fields.
4. OBSTRUCTIONS: Because of space limitations only the more dangerous obstructions are indicated. Natural obstructions, like trees, for example, clearly discernible for contact operations, are frequently omitted. On the other hand, all pole lines within at least 15:1 glide angle are indicated.
5. NEW AIRPORTS: At the end of each state, under this heading will be found, out of alphabetical alignment, all the new airports tabulated after the type for that state had been originally set up.
